# ABOUT FONTAINE HOSPITAL (CHF)

## ABOUT THE FOUNDER

Born February 9, 1960, in Cap Haïtien, Haiti, Jose Ulysse, from a very young age, always showed a great interest in social issues. Mr. Ulysse attended "Grand Séminaire Notre Dame" to become a priest studying under the Scheut Fathers.

More than halfway through, Mr. Ulysse discontinued his studies to financially support his family -- a common practice by older siblings in Haiti who suddenly must take on parenting responsibilities.

Despite his modest beginnings, the desire to serve and give back never wavered.

As a result, in 1991, at the age of 31, Mr. Ulysse founded a small clinic in Fontaine, Cité Soleil, Haiti known as Fontaine Hospital (CHF).

CHF is located in a highly marginalized, underdeveloped, and underserved community where gang violence, since 2022, has significantly limited or cut off access to healthcare for a majority of the community members.

CHF is recognized as the only operations hospital in the commune of Cité-Soleil (with an official estimated 300,000 inhabitants) by the Ministry of Public Health and Population (MSPP).

In addition to medical services, CHF's campus also serves as an education hub developing and recruiting local talent in vocational and academic training in an effort to revitalize the local economy.

Today, 70% of CHF's personnel lives in and around the community of Fontaine, Drouillard-Duvivier, Cité-Soleil, Haiti.

**CHF Mission Statement** : to provide quality, affordable, compassionate healthcare to at least 100,000 a year with an emphasis on the most vulnerable.

**CHF's Vision**: That CHF hospital has the human resources, material, equipment, energy in every department and the financial means to maintain or raise the standard of care each year.

## PROGRAM MISSION & EXECUTIVE SUMMARY

Our mission is to address the unique medical care , nutrition, and maternal and child health challenges faced by the highly marginalized communities at CHF or in the communities through our mobile clinics.

Our vision is a Haiti where healthcare is a universal right, with every community having access to primary healthcare establishment within a five mile radius and at least one regional hospital in every department.

In response to the growing healthcare disparities prevalent in highly marginalized communities, and displaced groups our grassroots nonprofit organization has developed a multifaceted program to address the population's diverse needs. The program comprises three core services: Mobile Clinics, Nutrition Services, and Pre and Postnatal Care, each tailored to provide essential support to those who most need it.

Our foundation executes its healthcare programs through its main local healthcare institution Centre Hospitalier de Fontaine or Fontaine Hospital (CHF).

# EXPECTED IMPACT

By the end of our program's first year, we aim to benefit 10,000 individuals in highly marginalized communities directly.

Our holistic approach seeks to improve overall health outcomes, treat and prevent malnutrition, reduce mortality rates, and empower women and families to lead healthier lives.

- Improve overall community health and well-being.
- Reduce mortality rates, particularly among women and children.
- Enhance nutritional status, reducing malnutrition.
- Empower women with comprehensive maternal and child health support.
- Alleviate the burden on local healthcare facilities by providing essential services through mobile clinics.
- Foster community and solidarity through shared nutritional and healthcare initiatives.
- Contribute to long-term community development by addressing health disparities.

# PROGRAM COMPONENTS

## MOBILE CLINIC PROGRAM HISTORY

Our mobile clinics started as a humanitarian response to the Aug. 14, 2021, earthquake in the Southern regions of Haiti.

Every week until it was no longer safe to do so, Fontaine hospital's (CHF) medical and trades team of 10-14 people traveled from CHF to remote regions affected by the earthquake to provide healthcare and build temporary living quarters, classrooms, and places of worship.

Once the commute through Martissant became too dangerous for our staff, we unfortunately stopped our work in the south. Since then, our mobile clinics have been servicing various communities in the commune of Cité-Soleil (Pyè6, Radyo Solèy, Blanchard, to name a few).

Two years later, with the increased number of internally displaced groups living in various schools and churches, our mobile clinics now serve displaced groups in Tabarre and Delmas, working with mayors and public entities such as Civil Protection.

# MOBILE CLINICS

## GENERAL INFO & SERVICES

- **Where We Work**

- West Department, Haiti

- **Who We Serve**

- Marginalized Communities
- Internally Displaced People (IDPs) Communities
- School and University Students
- Church Congregations
- Employee Corporate Healthcare

- **Average Number of Consultations Per Clinic**

- 200-300

- General Consultations : Infants - Seniors
- Pharmacy
  - Provision of affordable and MSPP authorized generic essential medications
  - Systematic follow up via registration of patients
- Mental Health Counseling
- Emergency Rehydration
- Emergency Hospital Referral
  - 72 hours of care if needed
- Lab work
- Patient File / Building Patient History
- Follow Up Call - Phone/ Telehealth

## KEY PERFORMANCE INDICATORS (KPIs)

- Number of Mobile Clinic Outreach Events:
  - Goal 100 per year
- Number of general consultations provided : 150 -300 per clinic
- Percentage of patients receiving required medications from clinic pharmacy :
  - Goal 60% of beneficiaries per clinic
- Number mental health counseling sessions conducted
- Access to treated water and meals during mobile clinic visits
- Number of emergency patient transport to Fontaine Hospital (CHF)
- Patient Satisfaction Rate :
  - Goal 90%
- Community Health Agent Engagement
- Train and engage 30 community health agents
- Measure the impact of community health agents in facilitating program services and community education.

## NUTRITION PROGRAM SUMMARY

There is a critical link between nourishment and healing, as well as nourishment and work performance.

Our nutrition program is committed to providing at least two (2) daily warm meals to :

1. CHF inpatients and outpatients
2. the CHF personnel
3. Community seniors

We aim to contribute to patients' and staff's holistic well-being by addressing the fundamental need for proper nutrition and fostering a foundation for recovery and resilience.

### Key Performance Indicators (KPIs)

- **Retention Rate:** Percentage of teachers who remain employed within the program for a specified period (e.g., academic year).
- **Professional Development Participation:** Percentage of teachers actively participating in professional development workshops and training sessions offered by the program.
- **Mentorship Program Effectiveness:** Improvement in the performance and job satisfaction of teachers participating in the mentorship program.

## MATERNAL AND CHILD HEALTH PROGRAM SUMMARY

For years now, Haiti's healthcare system has been imploding. Between the sociopolitical climate and the Biden administration's immigration policy, the few remaining institutions struggle to find qualified medical professionals and all supportive services within healthcare institutions.

Pregnant mothers and new mothers, especially pre-teens and teenagers, fare the worst in those unstable climates.

Our organization is inching towards facilitating access to comprehensive maternal and neonatal care and support services to the ones caring for this great nation's future.

The primary purpose is to prevent fetal and maternal mortality, especially premature infants and low birth weight due to maternal malnutrition, through pre and 6 months post-party support.

# MATERNAL AND CHILD HEALTH PROGRAM SERVICES & KPIS

- **Prenatal Care**

- Two - Three Ultrasound
- Doctor Consultation
- Lab work
- Prescription
- Birth
  - C-section
  - Natural
- 2 emergency visits
- Warm meals while an in patient
- Breastfeeding education/support
- Family Planning Education
- Family / Trauma counseling

- **Post Natal**

- 48 hours stay
- Breastfeeding support
- Lab work
- Prescription
- Neonatal Intensive Care (if needed)
- Warm meals
- Hygiene kit
- Dry food kit upon release

## KPIs

- **Provide pre-natal and post-natal services to 500 marginalized women/ year**
  - Ultrasounds.
  - Labor and Delivery
  - Parenting counseling/education
  - Neonatal care .
  - Breastfeeding support
- **Neonatal Intensive Care:**
  - Support 80% of mothers in successful breastfeeding;
  - provide NICU for 20 newborns annual
- Incidence of natural births versus C-sections.
- Neonatal Intensive Care Unit (NICU) admissions and successful outcomes.
- Number of newborns who start their vaccination schedule
- Number of women enrolled in family planning post birth
- Number of women enrolled in family planning pre birth
- Number of pregnant 10-17 year old girls

## BUDGET:

### SPONSOR ONE OR MORE EVENTS

Project Duration : 15 months

#### Mobile Clinics:

USD 4,000/ clinic

- Goal : 150 clinics / year
- : 200 beneficiaries / clinic

#### Nutrition

USD 3, 000/ month

- Goal: 2-3 meals/ day
- : 7 days / week
- : 500 beneficiaries

#### Maternal and Child Health

USD 500 / mother / Labor & Delivery

USD 700 / mother/ Labor & Delivery

+ 1 week NICU stay

- Goal: 500 mothers
- Goal: 100 preteen & Teen mothers

**\*\* With two (2) more diesel school buses, one (1) Diesel RV , Two (2) All-Terrain Diesel PickUp trucks , two (2) Diesel All Terrain Sedan / SUVs we can double the number of program recipients, and increase program efficiency.**
