

PRO V

Innovation doesn't happen by accident.
The Pro V didn't either.

We reimagined what was possible by
reengineering the best paddle technology
in the game.

Sharper precision and more intentional
power. That's Energy Unlocked.

ENERGY UNLOCKED

KINETICFRAME

PATENT-PENDING

Inspired by kick-point engineering in hockey sticks and golf clubs, the KineticFrame is built to flex and recover during impact.

Unlike traditional paddles with “diving-board” neck flex, the KineticFrame uses a proprietary flex-point architecture that allows the paddle head to move parallel to its original position.

Dual-pivot design produces a translational motion which delivers:

- Predictable & Repeatable Exit Trajectory
- Uncapped, Precise Power
- Reduced Launch-Angle Deviation
- Faster snapback for rapid exchanges
- Improved Energy Transfer Efficiency

PROV

POWER SHOTS | DRIVES, SPEED-UPS, COUNTERS

As swing speed increases, the frame loads and releases energy back into the ball. With how the Pro V flexes, the face is more stable allowing for a cleaner contact, more pop, and a higher ceiling for power when you attack while maintaining precision.

RESPONSIVE SHOTS | RESETS, DINKS

Incoming pace is absorbed and dissipated, in a controlled motion. Thus, allowing you to hold paddle position, control the ball, and place shots with confidence in tight exchanges.

SPIN

Extended ball contact increases dwell, allowing you to shape, dig, and curve shots in ways that no other paddle can.

INCREASED DURABILITY WITHOUT SACRIFICING PERFORMANCE

Additional Carbon Fiber placed strategically between the Propulsion Core and the Polypropylene Honeycomb Core
