Tree Descriptions

SEEDLINGS & TRANSPLANTS

Balsam Fir

Soft, waxy, aromatic, likes sun and cool moist well drained soils, paper and lumber, a favorite Christmas tree. **Michigan Native**

Black Spruce

Also called swamp spruce, moist, cool sites, used by wildlife for shelter and small animal food. **Michigan Native**

Blue Spruce

Slow to moderate grower in fertile loams and clays, windbreaks, wildlife and a very popular Christmas tree, blue color varies with nurseries.

Douglas Fir

Grows well on most upland soils except those with high lime content in top soil.

Hemlock

One of the more shade-tolerant evergreens, it can be sheared as a hedge, or planted for screening. Native to the eastern U.S. resembles Christmas trees. **Michigan Native**

Norway Spruce

Fast grower, does well on well to poorly drained soils, clay and loamy sands, identified by its drooping branches and large cones. windbreaks, timber, pulpwood and wildlife.

Red Cedar

Dense, somewhat prickly blue-green foliage that turns deep purple by late fall. Grows on most soil types except swamp. 30-100' in height. **Michigan Native**

Red Pine

Moderate to fast grower, prefers well drained soil, sand, loam, gravel. Windbreaks, timber, pulpwood and wildlife. Much better choice than Austrian Pine. **Michigan Native**

Tamarack -Though the tamarack tree resembles other evergreens, it is actually a deciduous conifer, meaning that it sheds its needles every fall. It commonly grows in swamps and sphagnum bogs but also grows in upland soils. **Michigan Native**

White Cedar

Prefers cold, wet sites with slow drainage, but not stagnant water, wider variety of wood uses. The most important winter food of Michigan's whitetail deer herd. **Michigan Native**

White Pine *Our State Tree!* Slow grower at first but once established grows faster, moist sandy loam, but will grow from swamps and sand, timber, windbreaks, pulpwood and wildlife. **Michigan Native**

White Spruce

Slow to moderate grower in fertile loams and clays, faster when established. Lumber, pulpwood, Christmas trees, wildlife. Deer are not overly fond of these. **Michigan Native**

Arborvitae (Thuja) -Their popularity as landscape plants is due to their fast-growing, easy-to-care-for nature, and the year-round visual interest they bring to a landscape. arborvitae is 'Emerald Green,' highly prized as a hedge or screen plant.

DECIDUOUS

Black Cherry

Grows best in deep, moist soil but, will grow in sandy soils. Wood is hard and strong, useful in furniture making, cherries are sweet and an important food source wildlife, deer mice, chipmunks and squirrels like to eat the pits and store for winter use. **Michigan Native**

Black Walnut

Moderately fast growth in moist sandy loam and silt, intolerant of shade likes open space, not a lawn tree and needs to be planted a distance away from other trees. Nuts are edible for wildlife. The most valuable hardwood in Michigan. **Michigan Native**

Hazelnut

Also known as Filbert, deep fertile well drained soils, do not tolerate wet feet, will produce a crop in 3 to 4 years, excellent turkey food source. **Michigan Native**

Mountain Ash

Grows best in rich moist soils, reach only about 15-25 feet in height with slender trunks, put on a showy floral display in late spring and early summer, flash their bright orange berries in the fall, bird food source, this is not a true ash and is not affected by Emerald Ash Borer. **Michigan Native**

Big Tooth Aspen -Rapid growth and is able to adapt to a wide range of soils, will grow on sands, loamy sands and light sandy loams. Grows to 60-80 ft. **Michigan Native**

Red Bud

A landscape tree with magenta pink flowers causes heads to turn and smiles to form, a favorite of horticulturists because of its ease of planting, rapid growth, pleasing form and ability to flower when only four to five years old. **Michigan Native**

Red Maple

Fast grower in a variety of soils, nice shade tree with beautiful red fall foliage. **Michigan Native**

Red Oak

Moderately fast growing in well drained, rich, moist loam soils, transplants easily, lumber and wildlife. **Michigan Native**

Silver Maple

Rapid grower in well drained moist soils, graceful foliage, used for lumber, birds, small mammal food source. **Michigan Native**

Sugar Maple

Slow grower in moist to poorly drained fertile soils, hardwood lumber and pulpwood, used for maple sugar. **Michigan Native**

Swamp White Oak-

Swamp white oak is a striking tree. The lustrous leaves have a two-tone appearance, dark green on top with a silvery-white underside. Fall color is an orange-gold to yellow in mid-autumn. An excellent shade tree for any landscape. **Michigan Native**

White Birch

Rapid grower in well drained sand, loam, used for reforestation, in yards and by wildlife. **Michigan Native**

White Oak

Slow grower in all but the wettest soils, food source for grouse, small mammals & whitetail. **Michigan Native**

SHRUBS

Butterfly Bush

Full sun to partial shade, slender arching branches, with stalks of fragrant color in lavender, white or magenta, mid-summer to frost.

Dogwood, Flowering

Dry to moist soils, beautiful white spring flowers, red fruit, birds and small mammals. **Michigan Native**

Dogwood, Gray

Well adapted to wet, dry or low fertility soils, white flowers, white berries, maroon colored fall foliage, wildlife. **Michigan Native**

Dogwood, Red Osier

Prefers moist soils, especially along streams, useful for erosion control, white flowers, small white fruit, red branches in winter. Whitetail **Michigan Native**

Dogwood, Silky

Moist soils, white flowers, blue fruit, useful for erosion control, birds and small mammals. **Michigan Native**

Elderberry

Rich moist soil in sunny location, white flowers, purplish-black fruit, Wildlife and wine making. **Michigan Native**

Forsythia

Best in full sun, golden yellow flowers in spring, used in borders and landscaping.

High Bush Cranberry

Tolerates poor soils, prefers cool, moist site, small white to pink flowers, fruit is translucent red berry. Species good for wildlife.

Lilac-Purple colored fragrant flowers in May.

Nannyberry

Moist to well-drained soils, white flowers, blue-black fall fruit, called wild raisin, birds and other wildlife. **Michigan Native**

Ninebark

Moist soil, large clusters of white flowers, red fruit, wildlife. **Michigan Native**

Rose of Sharon

Full sun to light shade, very showy large flowers.

Serviceberry

Well drained variety of soils, edible blue-black fruit, eaten by birds. **Michigan Native**

Winterberry

Also known as **Michigan Holly**, found in moist soils and occasionally drier soils, easy to grow, small white flowers, but look out when it comes to fall its slender branches are covered with small red berries that remain into winter giving color to the landscape, wildlife. **Michigan Native**

Witch Hazel

Bright yellow cluster blooms produce a woody brown nut capsule that when mature, explodes with a snapping pop, medicinal uses and whitetail. **Michigan Native.**

Arenac Conservation District always recommends Michigan Native trees and shrubs for best survivability and diverse species to ensure a healthy stand.

GARDEN PLANTS

Asparagus-Mary Washington-Heritage. Open pollinated variety. Medium to large purplish-tinged, tightly-budded spears. Grows well, one of the older, tried and true Varieties.

Blueberry-Blue Crop/Blue Ray -one of each plant.

Early to Mid Season crop. It has a long harvest period. This fruit is large with good flavor. Excellent color and a firm fruit. Blueberries need a well-drained soil, with a pH balance between 4.5 and 5.5.

Grapes, Concord

Vigorous and hardy, ideal for jelly and juice.

Grapes, Niagara

Popular white grape, excellent flavor, table use and wines.

Tips: Plant in early spring. place plants 2 ft. apart. Make sure the top roots 2" to 3" below ground line. Pack soil firmly around plant and water immediately plants can reach a height of 3-4'

Raspberries-Heritage.

Harvest starts in early fall and will last until extremely cold weather.

Soil tips: Raspberries prefer a soil pH of 5.6 to 6.2; if your soil is acidic, you can use ground limestone to increase the ph. Before planting , fertilize with 10-10-10 garden fertilizer or compost.

Strawberries- Seascape-A day neutral type of strawberry variety.

It is noteworthy for high flavor, high yield, large fruit size, firmness, symmetry, attractive appearance and flexibility in planting requirements

Flower Descriptions

Hibiscus Root

'Cherry Choco Latte' is a brand new, long blooming Hibiscus with a smaller size that is more suitable for tighter spaces. Very large, three-dimensional flowers are white with intense deep pink veining and a notably large red eye. Dark olive green foliage has bronze highlights

Hosta Dream Weaver:

Large, distinctive leaves have very wide, blue-green margins and sharply contrasting creamy white centers. Leaves are nearly round and are corrugated. White flowers appear on 26" scapes in midsummer

Neptas Cats Pajamas-A purr-fect Catmint for fans of 'Cat's Meow' who love the look but want a smaller scale version. The ball-shaped habit carries long, dark flower stems that hold indigo blue flowers

Clematis 'Violet Stardust' -This broad leaved hybrid Clematis is a cross between two distinct species, giving it a unique look and performance in the garden. The clump is covered with a profusion of small 1.5", blue violet, four to five-petaled, star-shaped nodding flowers. The centers of the flowers have creamy white anthers that contrast beautifully with the petals. Although this is a non-vining Clematis, the plant will benefit from support, either from staking or

Delphinium Million Dollar Blue!-Large spikes of semi-double to double true blue flowers have very erect stems. Strong stems carry the prominent blossoms above the dark green, deeply dissected foliage in early summer and then again in late summer or early fall.

Sedum:Touted as an improved 'Dragon's Blood', this selection sports attractive bronze-red foliage that keeps its color all season long. Rose-red flowers appear on short stalks above the foliage in late summer. A mass planting of 'Fulda Glow' is stunning.

Fruit Tree Descriptions

Auvil Early Fuji: Auvil to revolutionize the Fuji market, this sensational strain matures about six weeks ahead of standard Red Fuji sports yet produces a higher percentage of fruit. The fruit flavor, tree structure, and growth habit appear to be identical to other Red Fuji strains . EMLA 7 root stock

Arkansas Black Apple

The name says it all. Arkansas Black is a dark, red-skinned apple. This heirloom is a southern favorite for its sharp, biting flavor. Can be eaten fresh, made into cider, or used for processing. Rootstock Bud 111

Cortland: Its flavor is sweet compared to McIntosh, and it has a flush of crimson against a pale yellow background sprinkled with short, dark red stripes and gray-green dots. EMLA 111

Granny Smith-This green apple import from Australia has become an American standard. Consumers like it for its tart, crisp and juicy flavor and outstanding keeping qualities. Is used for both fresh packs and processing and produces large, round fruit. The tree is vigorous and sets crops early. Ripens in November. EMLA 106 rootstock, semi dwarf 15-20'

Honey Crisp Apple semi dwarf 15-20 ft. tall
Sweet as honey. Crisp, cream-colored flesh is mild, sweet and aromatic, ripens in early September. Root stock EMLA 111

Initial™ Apple-A scab-resistant variety. It matures approximately one week before Gala. The fruit has good size and has a red blush over a yellow background. This variety is prone to fruit drop, making it an ideal selection for food plots. Tree is relatively non-vigorous and the fruit is crisp with a mild acidic flavor. Initial™ is a triploid and therefore pollen sterile and can not be used as a pollinator. Rootstock Bud 111

Manchurian Crab Apple- white blooms

A flowering crab used to pollinate other apple varieties. The white flower is a very prolific pollen producer. Blooms early and through midseason. Fruit is too small for commercial purposes. Rootstock EMLA 7

Red McIntosh-This is the Summerland Red McIntosh. The fruit colors early with a deep red hue. A hardy and productive tree, it is sometimes used as a hardy understock for other apple varieties.. Ripens Late September . Rootstock EMLA7

Scarlett Spur II Red Delicious: Now comes the next generation of America's earliest, best coloring Red Delicious, Scarlet Spur II. Although Scarlet Spur II finishes coloring about three days earlier than its parent, it has all the winning characteristics of the original - dark mahogany color, crisp white flesh, excellent fruit production, and outstanding type. EMLA 111

Suncrisp Apples are medium in size with a large top tapering down to a rounder bottom. They have a yellow background overlaid with an orange-red blush; the skin is chewy and often russeted. The flesh is cream-colored and resists browning when cut open, with a starchy and somewhat juicy texture.
root stock EMLA 7

The Blackgold® Sweet Cherry tree blooms late to avoid frost zaps. This self-pollinating variety produces crops of deep-red sweet cherries that resist cracking. Mazzard root stock

Montmorency Cherry

The principal commercial tart cherry grown for processing. Montmorency is bright red on the outside and has clear, yellow flesh inside. The tree is early bearing in July, productive and self-fertile. Tart cherry. Rootstock MAHALEB.

Royal Ann cherry trees are perennial semi-dwarfs that bloom early April with harvest in mid-summer. They are deciduous trees that can be characterized by dark green leaves and clusters of small fragrant white flowers . Mazzard root stock.

Bartlett Pear-The leading commercial pear for both canning and fresh fruit sale. The fruit normally is of large size, has a smooth and attractive appearance. Its flesh is tender and juicy, buttery and of high dessert quality. Bears young and tree has a tendency for compact, upright growth which lends itself to dense plantings. Also excellent for home use. Ripens in August. Rootstock OHXF87

D' Anjou pear-Fruit firm, juicy and with a superbly rich flavor. Best flavor when stored for one or two months. Ripens in August, Excellent keeper. Rootstock OHXF87

Red Haven Peach-Tree is vigorous, very bud-hardy and productive. Fruit is medium-sized and colors to a brilliant red. One of the best commercial varieties. Ripens around August. Rootstock seed.

Sugar May Peach-Sweetest peach of its season: mid-June, about one month before Babcock. Very juicy and sweet with fine flavor. High fruit tasting scores. Excellent choice for early season peach. Medium to large size, attractive red skin. Rootstock Lovell.

Goldcot Apricot -An open-pollinated seedling of Perfection. The fruit is medium-size, nearly round. The color of the skin, which is moderately tough and thick, is golden. The flesh of Goldcot is firm and medium-orange in color. Variety is somewhat self-fruitful. Rootstock seed.

Stanley Prune- The gold standard for prunes. This variety produces abundant crops of oval-shaped fruit with deep purple skin and sweet golden flesh. Tastes great when picked fresh or when dried or canned. Mazzard rootstock

Rootstock –TREE SIZE

Standard: Mazzaed

Semi-Standard: EMLA 111, MAHALEB, OHXF 87 & 97, Seedling., Lovell or Bailey

Semi-dwarf: EMLA 7, Bud 111

In many cases, you may still want to plant pollinating partners to increase the size of your crops, but with self-pollinating varieties doing so is optional, you will still get fruit with only one plant!
