Black Spruce

Also called swamp spruce, moist, cool sites, used by wildlife for shelter and small animal food. **Michigan Native**

Blue Spruce

Slow to moderate grower in fertile loams and clays. Used for windbreaks, wildlife and very popular Christmas tree, blue color varies with nurseries.

Douglas Fir Grows well on most upland soils except those with high lime content in topsoil.

Norway Spruce

Fast grower, does well on well to poorly drained soils, clay and loam sands, identified by its drooping branches and large cones. Used for windbreaks, timber, pulpwood and wildlife.

White Pine *Our State Tree!*

Slow grower at first but once established grows faster, moist sandy loam, but will grow from swamp to sand. Used for timber, windbreaks, pulpwood and wildlife. **Michigan Native**

White Spruce

Slow to moderate grower in fertile loams and clays, faster when established. Used for lumber, pulpwood, Christmas trees, wildlife, deer are not overly fond of these. **Michigan Native**

Bud Caps

Protect the top of trees from deer. Prevents browse over winter, no moisture retention or build-up, removing the threat of mold and mildew. Guaranteed drainage and positive air flow. Less heat build-up within the cap. The tight mesh configuration provides a micro-climate shade factor that shows better vigor and bud development.

We always suggest using planting gel to help with plant survival.

Planting gel helps keep moisture around the roots of the trees.

Thank you for supporting The Arenac Conservation District!
