

Junior Aseptic Consultant – Job Reference #: 300520262

Position Summary:

Aseptic Experts is seeking a motivated and detail-oriented Junior Consultant – Aseptic Processing & Contamination Control to support consulting, training, and compliance-related projects within regulated manufacturing environments.

This position is ideal for individuals with hands-on experience in aseptic processing, environmental monitoring, microbiology, cleanroom operations, or sterile manufacturing who are looking to expand into consulting and operational support roles.

The Junior Consultant will support contamination control initiatives, gap assessments, risk assessments, aseptic observations, training activities, and technical documentation development while working alongside senior consultants and client leadership teams.

Key Responsibilities:

- Support contamination control and aseptic consulting projects within pharmaceutical, biotechnology, and related regulated industries
- Assist with operational walkthroughs, gap assessments, and contamination control evaluations
- Participate in aseptic observations and identification of contamination risks within manufacturing environments
- Support environmental monitoring program reviews, assessments, and trending activities
- Assist with development and revision of SOPs, training materials, and technical documentation
- Draft reports, summaries, risk assessments, observation findings, and compliance-related deliverables
- Support client meetings, training initiatives, and project execution activities
- Maintain professional communication with internal teams and client personnel
- Support inspection readiness initiatives through training, documentation review, and operational assessments

Minimum Qualifications:

- 3–5 years of experience within one or more of the following areas:
- Aseptic Processing
- Environmental Monitoring
- Sterile Manufacturing
- Microbiology

- Cleanroom Operations
- Pharmaceutical or Biotechnology Manufacturing

Foundational knowledge of:

- Aseptic technique
- Contamination control principles
- Environmental monitoring practices
- Good Documentation Practices (GDP)
- cGMP regulations and quality systems

Experience participating in:

- Gap assessments
- Risk assessments
- Investigations
- Training initiatives
- Compliance improvement activities
- Strong technical writing, organizational, and communication skills
- Ability to draft reports, procedures, observations, and technical summaries
- Proficiency with Microsoft Office applications including Word, Excel, PowerPoint, and Teams

Preferred Qualifications:

- Experience with:
- EU GMP Annex 1
- USP <797> and <800>
- ISO 14644
- Environmental monitoring trending
- Aseptic observation programs
- Root cause investigations
- CAPA systems

Bachelor's degree in:

- Microbiology
- Biology
- Chemistry
- Pharmaceutical Sciences
- Engineering
- Related scientific discipline

Core Competencies:

- Attention to detail
- Technical writing
- Professional communication
- Risk-based thinking
- Organizational skills
- Problem-solving ability
- Team collaboration
- Continuous learning mindset
- Client-focused professionalism

Work Environment:

- Combination of remote and on-site consulting activities
- Ability to travel based on client and project requirements
- Work within pharmaceutical, biotechnology, compounding, and controlled manufacturing environments requiring appropriate gowning and cleanroom practices

Why Join Aseptic Experts?

Aseptic Experts is focused on building practical, sustainable contamination control and aseptic manufacturing solutions that improve operational performance and strengthen regulatory readiness.

- Our consultants work directly with clients to support real-world operational improvements while continuing to develop technical expertise within highly regulated industries.
