EngraveLab BOSS Edition II **FLEX** is an add-on to the **SELECT** and **CUSTOM** packages that grew from a need to have one complete design and engraving software solution aimed at optimizing the possibilities of your BOSS Laser and your Rotary engraving/routing systems at the same time. You have all the commands that you are used to with your BOSS Edition II package, *plus* features and drivers needed to run a Bit driven system. Please call today for a free Interactive Demo or download the 15 day free Trial version. Once you see that the software marriage between Laser and Rotary Engravers will spark the future of your production needs, making the decision to add this attachment to your BOSS Laser PC obvious .

- **EngraveLab BOSS Edition II FLEX Add-On:** The **FLEX** add-on package maintains all the features of the Prime **Custom** and advanced **SELECT** BOSS Edition II Packages *plus* the features needed for a **Rotary Bit Driven Engraving System**.
- **Rotary Engraver and Router Filters:** Begin with industry-leading import filters, extensive file format support includes DXF, EPS, AI and PDF. Enhance your basic text with imported graphics, and improve your engraving efficiency with single-line engraving fonts. Output to a variety of Rotary Engravers, Vinyl Cutters, and CNC Machines.
- **Rotary Engraver and Router Drivers:** These Drivers allow direct output of your files to the individual rotary Engravers and Routers, controlling Speeds and Feeds and controlling the quality and look of the production piece after processing.
- **Simple Conversion of Multi-line Fonts Into Engraving-ready Single Line Fonts:** Create your own engraving fonts, don't buy them! Easily convert TrueType and Adobe PFB fonts into single line fonts.
- **Support for Most Laser and Rotary Engravers:** Outfit your shop with a single software package that supports all your production workflow. Economical, and also provides a standardized solution that requires less expertise of multiple software packages.
- **Optimized Fill Routines:** Maximizes efficient production by producing more, in less time. Male/Female Cuts as well as Centerline and Hatch-fill routines.
- **Automated Centerline Vectorization:** Stop wasting time exporting and importing files. Accurately convert your artwork into centerline objects that can be engraved as a sharp, clean vector graphics.
- **Arc and Contour Control :** Arrange Text and Objects into quick Arcs and easy to generate Contours for Cutouts and more.
- **3D Generator:** Powerful 3D chisel algorithm quickly and easily generates "V" or hand carved looking graphics and / or text. Select different conical or V-Bit tools and with the click of a mouse, easy to learn, easy to use.
- **Timely Support:** We support you from **Regional to National** – Phone Support and PC-2-PC instruction.
