

## Mynt POS Pre Installation Checklist

- Mynt POS is a “software based” pos system and does require an internet connection to process credit card transactions. Mynt POS has cloud based capabilities and does have remote access capabilities.
- All wiring/cabling **MUST BE DONE BEFORE INSTALLATION DATE** and is the sole responsibility of the End User and/or Merchant. Mynt and/or EPX is not responsible nor liable for end user/merchants cabling/wiring and/or internet in the physical location.
- Mynt POS stations require a cat 5 or ethernet cable to be run from the station location to the internet router location
- Mynt kitchen printers require cat 5 or ethernet cable to be run from the printer location to the internet router
- A menu and/or inventory **must** be provided to Mynt for programming prior to sending the order to Mynt
- A Mynt welcome email will be sent to you by POS Pros.
- Mynt will **NOT** send a welcome email. A Mynt representative will **call** the merchant to schedule the remote installation and training.
- Mynt will be installed remotely. There is **NOT** an option for onsite installation.
- Mynt will not move forward with the installation if the wiring is not completed before the installation date
- All training is done remotely.
- Mynt recommends using the system for the first time on a slower business day and **not** “Go Live” on the same day as installation

I, \_\_\_\_\_, have read and understand the above listed requirements for my Mynt POS to be installed and function properly. I understand that failure to ensure any of these requirements before the installation date could result in the POS system not being able to be installed correctly.
