Eternum Analytics Qualifier Guide

Possible Qualifiers:
B1: The target analyte is detected in the calibration blank or method blank at or above the limit of quantitation, but the sample result is below the limit of quantitation.
B2: The target analyte is detected in the calibration blank or method blank at or above the limit of quantitation, but the sample result is below the maximum allowable concentration.
D1: Confirm if the limit of quantitation and the sample results were adjusted to reflect sample dilution.
I1: The relative intensity of a characteristic ion in a sample analyte exceeded the acceptable 30% of the relative intensities of these ions in the reference spectrum, indicating interference
L1: The percent recovery of a laboratory control sample is greater than the acceptance limits but the sample's target analytes were not detected above the maximum allowable concentrations
M1: The recovery from the matrix spike was high, but the recovery to the laboratory control sample was within acceptance criteria.
M2: The recovery from the matrix spike was low, but the recovery from the laboratory control sample was within acceptance criteria.
M3: The recovery from the matrix spike was unusable because the analyte concentration was disproportionate to the spike level, but the recovery from the laboratory control sample was within acceptance criteria.
M4: The analysis of a spiked sample required a dilution such that the spike recovery calculation does not provide useful information, but the recovery from the associated laboratory control sample was within acceptance criteria.
R1: The relative percent difference for the laboratory control sample and duplicate exceeded the limit, but the recovery was within acceptance criteria.
R2: Determine if the relative percent difference for a sample and duplicate exceeded the allowable limit.
V1: The recovery from initial or continuing calibration verification standards is greater than the acceptance limits, but the sample's target analytes were not detected above the maximum allowable concentrations for the analytes in the sample.
Q1: Sample integrity was not maintained
Q2: The sample is heterogeneous, and sample homogeneity could not be readily achieved using routine laboratory practices
Q3: Testing result is for informational purposes only and cannot be used to satisfy dispensary testing requirements in R9-17-317.01(A) or labeling requirements in R9-17-317

This product has been tested by Eternum Analytics or another AZDHS approved laboratory using ISO/IEC 17025:2017 accredited testing methodologies and quality system as required by state law. Values reported relate only to the product tested and batched under the batch number identified above. Eternum Analytics makes no claims as to the efficacy, safety, or other risks associated with any detected or non-detected level of any compounds reported herein. Using marijuana during pregnancy could cause birth defects or other health issues to your unborn child. This Certificate must not be altered, and shall not be reproduced except in full, without the written approval of the technical lab director: David Scott, PhD
