

The Science Paradox

By C.E. Warner 4-14-22

**Scientific method is consistent.
Develop theory; test, fail, succeed.
Through the many changes remain persistent.
Failures will allow breakthroughs to proceed.**

**Human nature is more complex by far.
Beliefs, opinions are existence's core.
Paramount to prevent one's id to mar.
Challenges to this we will not explore.**

**Fearful minds must at all costs have peace.
Can't acknowledge any conflicting ideas.
Science must not threaten id to decrease.
The simple is fearful's panaceas.**

**Shades of truth are not in the world of the snide,
in them only their truth allowed to reside.**
