

Advantages of **ICONnect**^{VP} Business Phone Service

5 reasons your company will benefit from ICONnect.

1

Flexible Options — “Make it Your Choice”

ICONnect has been designed to provide your company choices of station types, mobility options, call flow patterns and key patterns. Configurations are even customizable through our integrated station programming and management portal.

2

Reliability — “Never Miss a Byte”

Voice over IP is far different from Data over IP. Time matters! ICON has leveraged its thirty plus year history in voice communication to build one of the most robust infrastructures to support Voice over IP. Voice is the “Priority of ICON” and our engineers constantly test, monitor and ensure your communication is crystal clear.

3

Security — “Keep it Private”

Our hosted ICONnect service is configured using encryption certificates for connecting your endpoint devices to our cloud host. This is unique compared to most “open-internet” VoIP hosted services that leave you out in the open. Although it takes a bit more engineering on our side it is well worth your piece of mind.

4

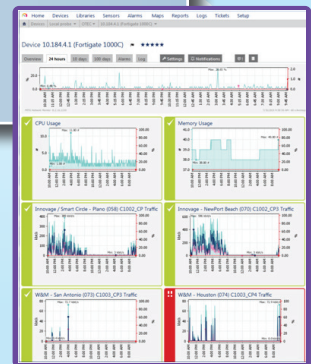

Engineered Solution — “Your Image”

Many cloud solutions operate as tenant based or co-op type services where you share the same infrastructure and operation limitations with others. Not ICONnect. Each customer’s ICONnect deployment is set up as an individually engineered instance within our cloud. This allows us to program the unique features you need to operate your business effectively.

5

More for Less — “Add Services, Reduce Expense”

Move your communications to the cloud for little or no capital investment. Reduce monthly expenses, eliminate unnecessary fees, and consolidate your communications expenses into a single monthly bill.

ICON specializes in cloud and customer-premises based voice, video and unified communications platforms.
