

The Weather Isn't The Problem. Knowing When To Act Is.

EVERY DAY, LEADERS FACE QUESTIONS LIKE:

- Do we shelter employees?
- Delay a shift change?
- Stop outdoor operations?
- Alert field personnel?
- Evacuate a worksite?
- Suspend athletic activities?

THE PROBLEM

Most weather alerts
are too broad.

Weather
radios.

Weather
apps.

County-wide
warnings.

Outdoor
sirens.

They often trigger alerts for areas that
are nowhere near your operation.

The result?

ALERT FATIGUE | CONFUSION | LOST PRODUCTIVITY.

THE DIFFERENCE

**Location-Based
Weather Intelligence**

WeatherCall monitors your exact facility location.
A customizable geo-fence is created around your site based
on the time required to:

- Shelter employees
- Secure equipment
- Shut down operations
- Protect patients and residents
- Maintain business continuity

When a warning enters that zone, WeatherCall
immediately notifies the right people.

BROAD ALERTS OVERWHELM

Large areas notified.
Most is irrelevant to you.

VS

WEATHERCALL GEO-FENCED ALERTS

Only when a threat enters
your protection zone.

- Focused alerts
that matter.
- Fewer false
alarms.
- Better
decisions.

**NOT EVERY STORM MATTERS.
THE ONE HEADED TOWARD
YOUR FACILITY DOES.**

Trusted by organizations in manufacturing,
healthcare, and senior care.

MANUFACTURING

HEALTHCARE

SENIOR CARE

Serious Weather. Serious Warnings.

Actionable alerts. Faster response. Better outcomes.

1 MONITOR

WeatherCall continuously monitors your facility using NWS warnings and lighting detection data. 24/7.

2 ALERT

You receive phone calls, texts, and emails when threats approach your site and break your geo-fence.

3 ALL-CLEAR

Automatic all-clear notifications let you know the threat has ended.
