

WeatherCall Services, LLC operates on the core philosophy "Layers Save Lives®," with a central mission to provide customers with the right information at the right time to ensure their safety during dangerous weather. The development of their products rests on several key operational principles. Automation is our key strength, decreasing the time to act! Phone calls and text messages are the last remaining disruptors for people.

Precision and location specificity.

- **WeatherCall®** continuously monitors the National Weather Service (NWS) NOAA weather wire and compares a client's exact location to the official warning and watch areas. We deliver highly-specific, storm-based NWS warnings and watches via phone, text, and email, allowing users to confidently decide when to take shelter.

Trust, reliability, and speed.

- **WeatherCall®** is the nation's premier notification system. We are proud of our unmatched record of waking people during nighttime tornado threats. To ensure reliability, **WeatherCall®** exclusively uses warnings issued by NWS meteorologists, actively avoiding "bogus" or computer-generated alerts with parallel servers assuring reliability. The speed of our notifications is unparalleled. When storms are bearing down, seconds matter.

No overwarning.

- **WeatherCall®** guarantees it will never alert people who are outside the NWS-defined warning areas or client-defined geofencing. This differentiates the service from other systems, like Wireless Emergency Alerts (WEA), NOAA weather radio, and free apps that overwarn those unaffected.

Preparation and timing.

- **WeatherCall's** primary function is to alert clients when to activate their safety plans. The company maintains a proprietary communication process with the NWS that begins days before an impending threat, a feature uncommon in competitive weather products. **WeatherCall Services** provides solutions for a wide range of clients, from commercial businesses and schools to housing communities and personal users, including mobile assets, helping them prepare for impactful weather.

WeatherCall NexGen[®]

Life-saving, address-specific severe weather alerts delivered directly to your phone, text, & email. WeatherCall NexGen warns you only when your exact location is inside a tornado, severe thunderstorm, or flash flood warning—so you never miss a call that could save your life. Great for homes, small businesses, & more!

WeatherCall for Business[®]

Protect your people, property, and profits. WeatherCall for Business provides real-time, geofenced location-based alerts that help decision-makers activate safety plans fast—keeping operations running smoothly and employees out of harm's way, while also knowing with certainty when it is SAFE to avoid shutdowns and sheltering.

WeatherCall GPS[®]

Always on the move? So are we. WeatherCall's portable battery-operated GPS tracks your location in real time to deliver mobile weather, anti-theft and lightning alerts wherever you travel. Perfect for fleets, RVers, boaters, and outdoor workers—because severe weather doesn't stand still. API integrations with existing GPS systems available.

WeatherCall Community[®]

When severe weather strikes, communities need a reliable voice. WeatherCall Community delivers hyper-local alerts and updates for towns, neighborhoods, campgrounds, and HOAs—keeping everyone connected, informed, and safe. Managers can also share routine notices like maintenance or event updates with one simple system via text messaging.

Integrations

Thanks to WeatherCall's history of working with other companies, many of our products are able to integrate into already existing systems:

- Intercomm systems
- Fire control panels
- Outdoor Warning Sirens and Speakers (existing or new, seamless integration with TechTrol, Inc.)
- School systems
- Company dashboards and WebEOC
- Limitless API integrations
