

# WeatherCall Community<sup>®</sup>

## Communities, HOAs, and Campgrounds

Site-Specific Severe Weather Alerts | Instant Guest Messaging  
Includes a simple QR check-in so every guest gets the right message at the right time.

### The Challenge

Generic apps overwarn counties and miss local threats, fueling alert fatigue. Communities of all sizes need **precise, location-based alerts** and a **fast way to reach all current residents & guests**.

### The Solution

WeatherCall monitors **National Weather Service warnings** 24/7, delivering official alerts to people **in the warning area - only when it applies to them!**

### NWS Polygon Precision

Alerts based on NWS warning polygons, not broad county lines—reducing false alarms and building trust. Proactive outlooks and watches provide lead time before warnings.

### QR Guest Experience **NEW**

Guests scan a QR code at the campsite to self-enroll in seconds. Registration tied to current stay; auto-removes at checkout to keep lists clean.

## 2007

Trusted Since

17+ years of reliable weather alerting

## 24/7

Monitoring

Continuous NWS warning surveillance

## 3

Alert Methods

Phone, text, and email delivery

### What you receive if a weather threat arises

- Phone calls for life-threatening events - extreme weather-type warnings
- Texts/emails for other alerts (severe storms, flash floods, advisories)
- Clear "In or Out" logic: If the community is in the NWS warning, you're alerted; if not, you aren't

**Give your residents and guests the safety—and clarity—they expect.**
