

*The Nation's **ONLY** anti-theft and dangerous weather monitoring and alert system*

A portable GPS device you can keep with you anywhere you travel in the United States and its territories alerting you when you are near danger.

The Problem

1. An **affordable anti-theft device** to know where your asset is at all times.
2. **Free apps and weather radios** that both overwarn you and don't track you while you travel, nor do they get your attention when you are in danger.

The Solution

Personalized, pinpoint warnings and asset tracking. Disruptive phone calls before deadly weather events, text messages for impactful weather heading your way, with texts/emails if your asset has been moved.

GPS-Based Alerting

Severe warnings only when your exact location is truly at risk.

Lightning & All Clear

Know exactly when it's *safe* to resume activity

Trusted Source

Based on official National Weather Service alerts & warnings

Special Features

- **Anti-Theft Security:** Receive instant alerts if the GPS unit moves unexpectedly.
- **App dashboard:** Track your GPS unit, radar, and forecast data in real time.
- **Phone calls:** To get your instant attention or awaken you when the most dangerous weather is approaching.

Why Choose WeatherCall GPS

- Real-time phone calls for dangerous events, along with texts and emails
- Alerts are location-based, not county-based
- 24/7/365 protection
- Designed by career meteorologists, engineers, and emergency management experts
