PEST & DISEASE RISK:	No elevated risks*

TEST COMMENTS:

While this site traditionally is high-yielding, this year Mother Nature had her way with the outcome of this trial. A severe wind event at the end of July swept through, bringing winds over 90mph. At this site, there was noticeable damage to the corn in several of the hybrids with lodging, goosenecking, and green snap. Careful notes were taken for lodging scores, and some hybrids tended to yield higher in relation to the lodging score that was given. The grain was dry, and no fungicide was applied at this site. Thanks to Chris for hosting a site in this area.
