TEST COMMENTS:

The location was planted in a very nice seedbed. After planting, the plot went 11 days before it caught a shower. Plants emerged well and grew tall. July was dry for pollination. At harvest, there was no major sign of issues, and ears were filled very well. Mark stated they had a major storm that hit their grain setup, damaged bins, and also flattened some corn fields. The plot location is very flat and uniform and did not get hit by the storm. Plants were tall and looked healthy; some hybrids were starting to show stalk lodging but were able to be harvested with no issues.
