Method: 8046V was planted in 6 strips (checks, in bold). Each entry's local check is the average of the 8046V strips on either side of it. % of Check = entry yield / local check x 100;
Adj. Yield = % of Check x check mean (252.82 bu/ac). Adj. Rank is based on Adj. Yield; Orig. Rank is the rank on the original report. Yields are bu/ac at reported moisture, not adjusted for MST or TWT.
Brand averages are simple means of all 64 strips and include all 6 strips of the 8046V check under Hoegemeyer (23 Hoegemeyer entries; 17 excluding the checks).
Strip order is assumed to follow the report order. Plot Avg. is the mean of all 64 strips.
