SPOT TREATMENT HOME CARE ADVICE

- The area treated may feel irritated; redness may develop and light scabbing may form.
- Make sure you do not pick any scabbing. Premature removal of scabs may cause hyper or hypo pigmentation and/or scarring.
- Using a Q-tip, apply a light layer of Aquaphor to the area twice daily.
- Sun protection must be used every day to avoid pigment changes.
- Clean area with a mild cleanser daily, and gently pat dry.
- Do not rub, cleanse with a washcloth, or use any exfoliants or products containing alcohol, retinol, or alpha hydroxy acids for 21 days after the treatment.
- For 48 hours DO NOT use a hot tub, swim in a pool, use a sauna, or steam room.
- Make-up may be applied with a clean make-up sponge 24 hours after treatment.
