

# The Academic Collaborative Inventory

The AC Dashboard seeks to put the “collaborative” in Academic Collaborative by cataloging the resources each AC member has that could be combined with other member resources to create new opportunities.

Possible categories of resources:

- Faculty Expertise and/or discoveries
- Labs & equipment
- Infrastructure
- Innovation & entrepreneurship resources and/or programs
- Education & training
- Student resources
- Workforce resources

Resources could also be anything else happening at the university that might support innovation and entrepreneurship in diagnostic technology to promote health equity.

In October 2024, we will begin collecting an inventory of resources. Once we have a sense of what is available, we plan to construct a dashboard to support partnerships across member institutions and between AC members and external partners such as entrepreneurs, providers, and payers.

Be thinking about how your institution wants to get involved in the AC and what resources you would add to the inventory.
