## Academic Collaborative

### WELCOME!

We are excited that you are a part of the Academic Collaborative. Our shared purpose is to collaboratively harness the collective power of Georgia's academic institutions to rapidly respond to R&D, speed translation, and provide education that advances health equity and diagnostic technologies. Your participation and unique academic strengths, not only broadens our capacity, but enhances our abilities to improve healthcare and health outcomes across diverse communities in Georgia.

We look forward to collaborating with you and creating a positive impact together in Georgia.

**Dee Warmath**, *Director of Communications*  
**Brad Phillips**, *President*

### SHARE YOUR STORIES

As a member of the Academic Collaborative, we invite you to share what is happening at your institution related to health equity and/or diagnostic health technology for inclusion in an upcoming newsletter.

## TYPE 2 STATUS

Our initial submission for a Type 2 award was submitted to NSF. This is the second step in the process. If invited, our full submission will be due in February.

### How can you help?

We need to prepare an inventory of resources (faculty expertise, lab space, research centers, etc.) that could be available to the Innovation Engine. In October, we will start asking you for inputs to the inventory. **If you can begin thinking about your contributions to the inventory, that would be helpful.**

### AC SHOW & TELL

## EMORY ADJUST CENTER

This center operates to rethink how and where disease diagnosis occurs through technology development and practice innovation. The work seeks to reach the patients in greatest need by addressing issues of accessibility, usability, and affordability; thereby, removing barriers and advancing the entire field of diagnostics.
