

500 Series Pump

Our 500 Series Pumps are tough little pumps that are simple to use and cost competitive for a variety of applications in the oil and gas market.

Our 500 Pump line includes metering pumps, magnetically driven pumps and general utility pumps. Most 500 pumps are equipped with an innovative “wobble” stator design but it could also be equipped with a tube-type stator design for higher efficiencies

Applications

- Sump and drain transfer
- Waste tank recycle
- Crude oil and water transfer
- Chemical additives
- Water injection
- Chemical injection
- Tank sump cleaning
- Sampling
- Dirty oil, oily water transfer
- Oil water separation

Features and benefits

- Compact design
- Reliable performance
- Simplified construction
- Low shear pumping action
- Varying fluid viscosity does not impact pump performance
- Self-priming
- Quiet operation and no vibration
- Lower total cost of operation / ownership
- Up to 53 GPM capacity / 1,815 BPD
- Up to 300 psig differential pressures
- 14 F up to 240 F temperature
