BEFORE

AFTER

## What are the most common shelves for closets?

Wire Shelves are the most popular and affordable shelving.

## What are the pain points of wire shelving?

◆ Can't slide or move items

◆ Things fall through the wire

◆ Hard to clean

◆ Visually messy

## What is the Solution?

# CedarSafe's *Inspire the Wire!*

◆ Easy to slide or move items

◆ Items can't fall through

◆ Easy to clean

◆ Sleek organized look

◆ Luxurious aroma

## STEP 1:

### Measure your Wire Shelf

Measure the depth of your wire shelf. Some shelving units have a depth of 12", 16" and 20".

## STEP 2:

### Cut the Planking Pieces

Cut your Aromatic Cedar planking pieces according to your previous measurements and set aside.

## STEP 3:

## Measure your Moulding

Measure the length of your shelving.

## STEP 4:

## Cut your Moulding

Cut your moulding pieces according to your previous measurements. If 2 sides of your shelf are exposed, use a miter cut to join them.
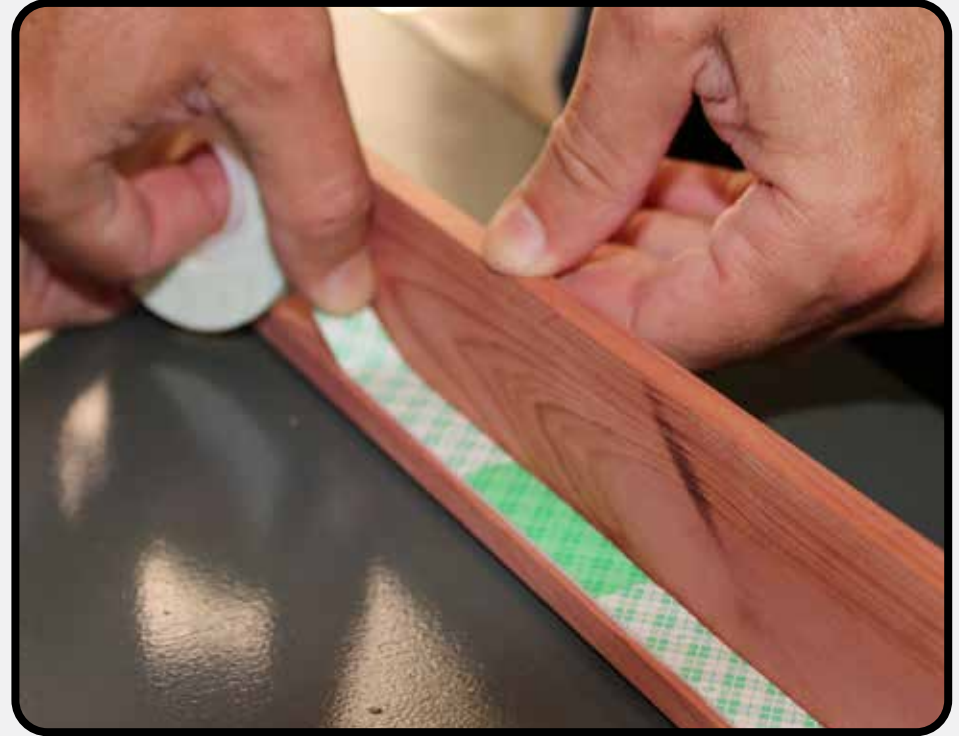

## STEP 5:

## Lay your Planking Pieces

Lay each planking piece vertically along the shelf, making sure they are flush against the back wall or structure. Please note: the final plank may be wider than the shelf and require trimming.

## STEP 6:

## Apply the Double-Sided Tape

Apply the double sided tape by peeling the film off one side and pressing firmly onto the inner top lip of the moulding.

## STEP 7:

## Secure the Moulding

Peel the film off the other side of the tape and press the moulding piece firmly onto your shelf - making sure the corners line up.

## STEP 8:

## Apply Tape for Back Wall Trim

Cut the double-sided tape into one inch pieces and apply to the back of the wall about a half inch over the flat planking pieces.

## STEP 9:

## Secure the Back Wall Trim

Remove the film from the other side of the double-sided tape and firmly press the trim down against the planking pieces and back against the wall or structure.

# Enjoy your new shelf makeover!
