

GAME CHANGING INNOVATION FOR EXCEPTIONAL ICE

The FastICE system creates superior ice with a computer controlled high pressure pump for an even and accurate fine mist water application, resulting in significant savings of time and energy.

FastICE®
ICE MAKING
SYSTEM

-  The onboard console allows real-time control of system functions
-  The precise mist application freezes on contact eliminating excess water on the ice
-  Less gasses trapped in the ice, minimizes the need for temperature adjustments
Build ice faster at higher temperatures

FastICE ADVANCED ICE MAKING SYSTEM

Automated and precise control of water application is proportional to machine speed. This produces a stronger, faster and smoother surface with reduced "insulation factor". Ice can be maintained at a lesser thickness, resulting in significant energy savings.

FLASH FREEZE

Precisely aligned spray nozzles deliver a pressurized mist of fine droplets. The smooth and consistent application freezes and bonds quickly and evenly with the existing surface, dramatically improving the quality of the ice.

CONSISTENCY AT ANY SPEED

The hydraulically controlled pressurized water pump system is regulated by the speed of the machine, synchronizing the flow of water with an on-board computer-controlled spray rate.

DATA AND ON-DASH CONTROL

On-dash display provides live data for ground speed, water used, spray thickness, start / finish and total application time. Toggle between server preset screens for additional info.

GLOBAL SERVICE AND SUPPORT

A network of Zamboni Authorized Distributors provides service and support worldwide.
