NOTES

We Specialize in CONCENTRATES

GH Labs, LLC. has invested in one *Ramon and Evan in the Lab* of the most advanced extraction laboratories in and around New Mexico. **GH Labs** offers a state-of-the-art HAL Booth, a C1D1 Explosion-proof room for BHO extraction. We also utilize CO2 and Cold Wash Ethanol Extraction. GH Labs uses Prescott Technologies Distillation to produce absolutely pure and top quality oils. Unlike other producers, who use remediation to render a clear product, we will only remediate the extracts upon request. We are available for any licensed grower in the state of New Mexico who is looking to turn their grow into products for the New Mexico market.

“We offer ‘True-to-plant’ remedies.”

The first run of CO2 pressure extraction renders a THC essential oil that is golden like honey. The name of our top-of-the-line extractions gets its name from this amber jewel, Green Gold Extracts.

On the Top Shelf, you will find Green Gold Extracts. “We follow a ‘True-to-plant’ protocol that works to preserve the essence of the extracted flower,” says Ramon Canales, Extraction Manager for GH Labs. “It’s like fine wine. We work in small batches where we focus on quality over quantity in the process,” says extractor Evan Brown. These Live Resin products capture the taste and sensation of the original flower.

*510 Thread in
Popular Terpene Profiles*

BHO Hydrocarbon extracted
with a 70/30 blend of solventless
and butane; the closest you can
get to smoking wax.

505

BUDZ NM

The GH 505 Budz Cartridges
are pure BHO oil with
re-introduced
cannabis-derived flower
terpenes for the
budget-minded
consumer and retailer.

Our BHO Extraction
produces quality
THC essential oil.

These are configured over 250 different
profiles to achieve the “entourage effect”
that you come to expect from a specific
strain. In other words, we take the
terpene profile of popular strains to create the
correct flavor and effect of the strain.

510 THREAD

ALL-IN-ONE

JINJA

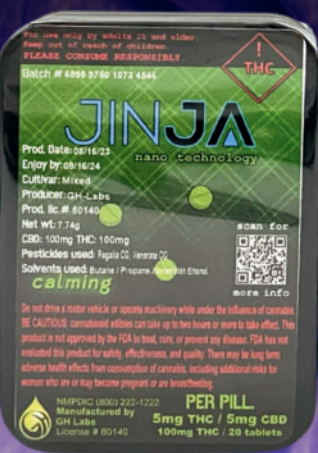

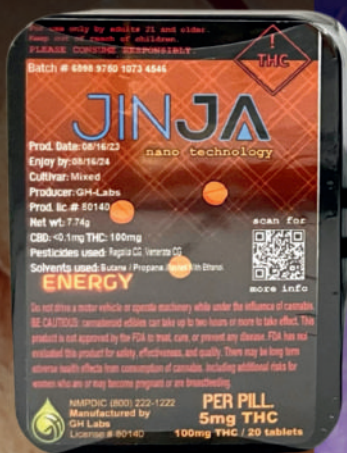

WHAT IS THE REASON BEHIND NANOTECHNOLOGY?

The idea behind nanotechnology is by breaking down the THC particles and reassembling them to dissolve in both water and fat, allowing it to more easily be absorbed through the body and reach the liver faster, increasing bioavailability by 80%.
