FOR IMMEDIATE RELEASE

INTRODUCING BIO 520 LIQUID MINERAL NUTRIENTS FOR GREAT LAKES GROWERS

Grand Rapids, MI – New at the 2026 Great Lakes Expo will be a globally successful OMRI Listed liquid mineral nutrient called BIO 520.

BIO 520 Beyond Green® offers a plant-safe growth booster that is research-proven to significantly increase yield and weight and improve crop quality and help plants defend from environmental stressors. A proprietary process from the manufacturer, Beyond Green, makes mineral nutrients more bio-available to plants, especially silica and rare earth minerals. These nutrients are extracted from an exclusive source of volcanic magma and seawater sediment.

BIO 520 Beyond Green® is suitable for foliar applications in traditional and organic crops, especially Michigan crops like grapes, vegetables, and tree fruits. The product is compatible in a tank-mix and easily dissipates.

Hydroponic and commercial greenhouse operations appreciate the ease of application in any drip irrigation system, and how the nutrient mix enhances the growth and flowering of ornamental and cannabis plants.

Learn more about BIO 520 by visiting Leaf Ag Sales at **GL Expo booth 1302**, which offers an exclusive discount from normal pricing for Michigan growers through the end of 2025. Trial samples will be available for qualified growers and retailers.
