

Dynamite®

Crapemyrtle

***Lagerstroemia indica* 'Whit II' Cultivar**

U.S. Plant Patent # 10296

Dynamite® is the first true red crapemyrtle tree form. The cherry red flowers generally appear by early July and continue until frost. Seed production is modest and do not need to be removed in order to have prolonged flowering. Dynamite® grows and flowers best when NOT pruned back in the winter. Remember, pruning is always stunting. Flowering is best in full sun.

Features

- * Flowers: cherry red
- * Buds: crimson
- * Foliage: crimson new leaves quickly change to green
- * Fall color: orange
- * Growth habit: single or multiple stem, very large shrub or small tree, 20 feet or more in height
- * Very drought tolerant
- * Highly resistant to powdery mildew

Developed and patented by Dr. Carl Whitcomb, Stillwater, Oklahoma

Crapemyrtle grow best and flower most profusely in full sun. Crapemyrtle will grow in most soils, however the better the plant growth, the more flowers. Water during droughts for better flowering. Fertilize moderately ONLY in spring; do not fertilize crapemyrtle in the fall.

Dynamite® is a registered trademark of Lacebark, Inc., an Oklahoma Corporation.
