Registration fee includes:

- [] CP-1 36th Edition: Technician Workbook
- [] Performance exam
- [] Written exam
- [] Lunch

Location

- [] Amman-Jordan
- [] Lafarge concrete – Abu Alandah

Take advantage of the opportunity to obtain the ACI Concrete Field Testing Technician Certification. This valued and important certification is specified in many projects across the Region. **The Jordan Concrete Association** is pleased to be able to offer this important certification program to the Jordan concrete community.

Our sessions are fast paced and encourage attendees to participate. The review is filled with questions and discussion using power point presentations, sketches, videos and hands-on practice with concrete using the same test equipment that will be used during the examination. These review sessions are very helpful in preparing for the written and practical examinations.

The examinations (written and practical) are offered on the same day. The one-hour **written examination** is closed-book and consists of 55 multiple-choice questions. The **performance examination** is also "closed book" and requires actual demonstration of six of the required test methods and practices plus a verbal description of Practice C172/C172M (sampling).

Participants are encouraged to Order the 2017 Grade I workbook in advance to be fully prepared to pass the exam.

The registration for this course is online only through JCA website:
