

# Converting Fractions to Decimals to Percentages

Includes notes, examples, and practice test  
(w/solutions)

## Converting Percents into Decimals

Keep in mind: the percentage represents "the portion out of 100"..  
and, in a number, two places right of the decimal point is the hundredths place!

Therefore, to convert a percent into an equivalent decimal:

- 1) Move the decimal place 2 places to the left
- 2) Remove the percent sign

*Examples:* 73%

Step 1)  $\underline{.73}\%$  (move decimal 2 places)

Step 2)  $.73$  (erase the percent sign)

80%

Step 1)  $\underline{.80}\%$

Step 2)  $.80 = .8$

2%

Step 1)  $2\% \rightarrow \underline{.02}\%$

Step 2)  $.02$

135%

Step 1)  $\underline{135}\%$

Step 2)  $1.35$

54.788%

Step 1)  $\underline{54.788}\%$

Step 2)  $.54788$

## Converting Percents into Fractions

Since the percentage is "the portion out of 100", it's rather easy to convert into a fraction:

- 1) Write the percentage divided by 100:

$$\frac{\text{percentage}}{100}$$

- 2) If necessary, change the numerator to a *whole number* (i.e. removing the decimal):

Multiply the numerator (and denominator) by multiples of 10 to move the decimal...

- 3) Simplify (i.e. reduce) the fraction

*Examples:* 45%

Step 1)  $\frac{45}{100}$

Step 2) Skip (because numerator is whole number)

Step 3)  $\frac{9}{20}$  (simplified by dividing numerator and denominator by 5)

10.3%

Step 1)  $\frac{10.3}{100}$  (multiply numerator and denominator by 10)

Step 2)  $\frac{103}{1000}$  removing the decimal

Step 3) Skip (cannot reduce)

400%

Step 1)  $\frac{400}{100}$

Step 2) Skip

Step 3)  $\frac{4}{1} = 4$

20.08%

Step 1)  $\frac{20.08}{100}$  Multiply numerator and denominator by 100

Step 2)  $\frac{2008}{10000}$  Then, reduce the fraction

Step 3)  $\frac{2008}{10000} = \frac{1004}{5000} = \frac{502}{2500} = \frac{251}{1250}$

## Converting Fractions into Decimals

*Method 1: "Change Denominator to Power of 10"*

Step 1: Find multiple of denominator that is also a power of 10

Step 2: Rewrite equivalent fraction, where denominator is power of 10

Step 3: Write the numerator with a decimal point in the correct position  
(i.e. move the decimal to the left for each 0 in the denominator)

*Method 2: "Long Division"*

Divide the numerator by the denominator.

(If the numerator is less than the denominator, add decimal point and zeros)

<i>Examples:</i>	$\frac{1}{4}$	(Method 1)	(Method 2)
		Step 1) 100 is a multiple of 4 AND it is a power of 10 (10 x 10 = 100)	$\begin{array}{r} 0.2500 \\ 4 \overline{) 1.0000} \\ \underline{-0.} \\ 1.0 \\ \underline{-.8} \\ .20 \\ \underline{-.20} \\ 000 \end{array}$
		Step 2) $\frac{1}{4} \times \frac{25}{25} = \frac{25}{100}$	.2500
		Step 3) $\frac{25}{100}$ (2 zeros in 100)  .25	
	$\frac{3}{8}$	Step 1) 8 is not a factor of 10 or 100. But, it is a factor of 1000	$\begin{array}{r} 0.37500 \\ 8 \overline{) 3.0000} \\ \underline{0.} \\ 3.0 \\ \underline{2.4} \\ .60 \\ \underline{.56} \\ 40 \\ \underline{40} \\ 0 \end{array}$
		Step 2) $\frac{3}{8} \times \frac{125}{125} = \frac{375}{1000}$	0.375
		Step 3) $\frac{375}{1000}$ (3 zeros in 1000)  .375	
	$\frac{1}{6}$	Step 1) 6 is <u>not</u> a factor of 10, 100, 1000, 3 etc.. So, we must do an approximation.. (6 is a factor of 102)	$\begin{array}{r} 0.1666 \\ 6 \overline{) 1.0000} \\ \underline{-0} \\ 1.0 \\ \underline{-.6} \\ .40 \\ \underline{-.36} \\ 40 \\ \underline{-.36} \\ 40 \text{ etc..} \end{array}$
		Step 2) $\frac{1}{6} \times \frac{17}{17} = \frac{17}{102}$ approx. .17 &	.1666
		Step 3) $\frac{1}{6} \times \frac{167}{167} = \frac{167}{1002}$ approx. .167	

## Converting Fractions into Percentages

Since percent implies "per 100", we are looking to convert the fraction into a portion of 100!

So, if possible, to convert into a percentage:

Step 1: Find a number you can multiply the denominator by to get 100

Step 2: Multiply numerator and denominator by that number

Step 3: Take the numerator and add a percent sign

*\*\*Basically, we are looking for an equivalent fraction where the denominator is 100*

Examples:  $\frac{2}{5}$  Step 1) If we multiply 5 by 20, we get 100..

$$\text{Step 2) } \frac{2}{5} \times \frac{20}{20} = \frac{40}{100}$$

Step 3) 40%

$$\frac{2}{5} = \frac{x}{100}$$

To find x, *cross multiply*

$$5x = 200$$

$$x = 40$$

40%

$\frac{7}{200}$  Step 1) If we multiply 200 by .5, we get 100

$$\text{Step 2) } \frac{7}{200} \times \frac{.5}{.5} = \frac{3.5}{100}$$

Step 3) 3.5%

$$\frac{7}{200} = \frac{x}{100}$$

Cross multiply: 3.5%

$$200x = 700$$

$$x = 3.5$$

$\frac{325}{20}$  Step 1 and 2)  
Multiply numerator and denominator by 5

$$\frac{325}{20} \times \frac{5}{5} = \frac{1625}{100}$$

Step 3) 1625%

$$\frac{325}{20} = \frac{x}{100} \quad 1625\%$$

$$x = \frac{325 \cdot 100}{20} = 1625$$

## Converting Decimals into Fractions

Recognizing that a decimal number  $x = \frac{x}{1}$ , it's rather easy to change most decimals into a fraction

Step 1: Express the decimal as a fraction

Step 2: multiply numerator and denominator by 10 (changing to an equivalent fraction)  
Repeat until decimal is gone

Step 3: If necessary, simplify (i.e. reduce) the fraction

Examples: .35

Step 1)  $\frac{.35}{1}$

Step 2)  $\frac{.35}{1} \times \frac{10}{10} = \frac{3.5}{10} \times \frac{10}{10} = \frac{35}{100}$

Step 3)  $\frac{35}{100} = \frac{7}{20}$

.137

Step 1)  $\frac{.137}{1}$

Step 2) To move the decimal 3 places to the right, we need to multiply by 1000

$$\frac{.137}{1} \times \frac{1000}{1000} = \frac{137}{1000} \quad (\text{since } 137 \text{ is prime and not a factor of } 1000, \text{ we cannot reduce this fraction})$$

233.14

Step 1)  $\frac{233.14}{1}$

Step 2) multiply numerator and denominator by 10 x 10 (100)

$$\frac{233.14}{1} \times \frac{100}{100} = \frac{23314}{100}$$

Step 3)  $\frac{23314}{100} = \frac{11657}{50}$

Also,

$$233.14 = 233 + .14$$

$$= 233 + \frac{14}{100}$$

$$= 233 \frac{7}{50}$$

## Converting Decimals into Percentages

Two places to the right of a decimal represent "the hundredths place"..  
Since a percentage expresses the amount "per 100",

it's rather easy to convert a decimal into a percent:

Step 1: Move the decimal point two places to the right (adding 0's if necessary)

Step 2: Add the percent sign

*Examples:* .35

Step 1)  $\underbrace{.35}_{\text{2 spaces}}$  (2 spaces) 35.

Step 2) 35%

.06

Step 1) .06 (2 spaces to the right) 06.

Step 2) 6%

4.655

Step 1) 4.655 (move decimal) 465.5

Step 2) (add percent) 465.5%

.3572

Step 1) 35.72

Step 2) 35.72%

62

Step 1)  $\underbrace{62.00}_{\text{move decimal (and add 0s)}}$  6200.

Step 2) add percent: 6200%

The two large squares are congruent...  
And, each is divided into smaller squares..

Which area is larger: Blue or Green ?  
Or, are they equal?

Answer on Next Page-→

"75% of this class passed the test --  
-- which is 50% more than last  
year's class...."

A Sense of Percents

24 students  
A - 5  
B - 8  
C -

Okay, 75% of 24  
is 18.. And,---

"25% last year!  
What a bunch of idiots!!"

And, there's a 100%  
chance *he'll* be in  
next year's class...

Pre-Algebra

Questions: Assuming each class has 24 students, how  
many passed last year? what percentage passed?  
(Answers will come in time!)

LAF #150 (8-7-14)  
mathplane.com

The two large squares are congruent...  
And, each is divided into smaller squares..

Which area is larger: Blue or Green ?  
Or, are they equal?

**ANSWER:**

Since the large squares are congruent, and divided into smaller equal squares, we'll use a ratio comparison:

$$\frac{5}{9} = .5\overline{55} \quad \frac{13}{25} = .52$$

The blue area is bigger!

SOLUTIONS

Quiz: Converting Decimals to Fractions to Percentages to....

Change each to a (repeating) decimal:

$$\frac{2}{9} = .\overline{222}$$

$$\begin{array}{r} 0.2222 \\ 9 \overline{) 2.0000} \\ \underline{-1.8} \phantom{00} \\ .20 \\ \underline{-.18} \phantom{00} \\ .020 \\ \underline{-.018} \phantom{00} \\ .0020 \\ \underline{-.0018} \phantom{00} \\ \phantom{.}0002 \\ \underline{-.00018} \phantom{00} \\ \phantom{.}00002 \\ \underline{-.000018} \phantom{00} \\ \phantom{.}000002 \\ \underline{-.0000018} \phantom{00} \\ \phantom{.}0000002 \\ \underline{-.00000018} \phantom{00} \\ \phantom{.}00000002 \\ \underline{-.000000018} \phantom{00} \\ \phantom{.}000000002 \\ \underline{-.0000000018} \phantom{00} \\ \phantom{.}0000000002 \\ \underline{-.00000000018} \phantom{00} \\ \phantom{.}00000000002 \end{array}$$

etc....

$$\frac{22}{7} = 3.\overline{142857}$$

$$\begin{array}{r} 3.142857 \\ 7 \overline{) 22.00000} \\ \underline{-21} \phantom{00000} \\ 1.0 \\ \underline{-.7} \phantom{00000} \\ .30 \\ \underline{-.28} \phantom{00000} \\ .020 \\ \underline{-.014} \phantom{00000} \\ .0060 \\ \underline{-.0056} \phantom{00000} \\ .00040 \\ \underline{-.00035} \phantom{00000} \\ .000050 \\ \underline{-.000049} \phantom{00000} \\ .000000 \end{array}$$

$$3.142857\overline{142857}$$

Express the following as fractions:

$$.\overline{4}$$

$$.21\overline{21}$$

$$2.0\overline{33}$$

let  $n = .\overline{44}$   
then  
 $10n = 4.\overline{44}$

$$\begin{array}{r} 10n \quad 4.\overline{44} \\ - n \quad - .\overline{44} \\ \hline 9n \quad 4 \end{array}$$

since  $9n = 4$ ,  $n = 4/9$

let  $u = .21\overline{21}$   
then  
 $100u = 21.21\overline{21}$

$$\begin{array}{r} 100u \quad 21.21\overline{21} \\ - u \quad - .\overline{21} \\ \hline 99u \quad 21 \end{array}$$

since  $99u = 21$ ,  $u = 21/99$

$$2.0 + .033\overline{3}$$

let  $m = .033\overline{3}$   
then  
 $100m = 3.33\overline{3}$

$$\begin{array}{r} 100m \quad 3.33\overline{3} \\ - m \quad - 0.033\overline{3} \\ \hline 99m \quad 3.3 \end{array}$$

since  $99m = 3.3$ ,  $m = \frac{3.3}{99}$

so,  $2.0 + 3.3/99 \rightarrow 2 \frac{1.1}{33}$

Place the following portions in order (from greatest to least)

A)  $\frac{77}{100}$   $.7700$   $\frac{777}{1000}$   $.7770$   $7\%$   $.0700$   $.7$   $.7000$   $\overline{.77}$   $.77777$

(greatest to least)  $\overline{.77}$   $\frac{777}{1000}$   $\frac{77}{100}$   $.7$   $7\%$

B)  $24\%$   $.2400$   $\frac{1}{4}$   $.2500$   $\frac{240}{1001}$   $<.2400$   $\overline{.24}$   $.2444$   $.2424$   $.2424$

(greatest to least)  $\frac{1}{4}$   $\overline{.24}$   $.2424$   $24\%$   $\frac{240}{1001}$

Find the following:

$$.6 + \frac{3}{5} = .6 + .6 = 1.2 \text{ or } 6/5 \text{ or } 1 \frac{1}{5}$$

$$\overline{.44} - \frac{2}{5} = \text{since } 2/5 = .4$$

$$\begin{array}{r} .44444 \dots \\ - .40000 \dots \\ \hline .04444 \dots \end{array}$$

$$.0\overline{44}$$

*One more thing...*

Vinculum (Bar) and "Repeating Decimals"

Vinculum: A horizontal bar drawn over multiple quantities to indicate they are grouped together.

Examples include: radicals  $\sqrt[3]{9X^3}$   
 line segments  $\overline{AB}$  (joining points A & B)  
 repeating decimals  $0.77\overline{6}$

Repeating Decimals: A decimal number that eventually becomes periodic (i.e. "the end repeats indefinitely")

Examples:  $\frac{1}{3} = 0.333333... = 0.\overline{3}$   
 $\frac{22}{7} = 3.\overline{142857142857}... = 3.\overline{142857}$   
 $12.0340353535... = 12.03403\overline{5}$

Converting Fractions to Decimals: Divide the numerator by the denominator

Examples:  $\frac{42}{9} = 4.\overline{666}$       $\frac{3}{700} = 0.00428571\overline{}$

Long division for  $\frac{42}{9}$ :  
 $9 \overline{) 42.000}$   
 $\underline{-36}$   
 $60$   
 $\underline{-54}$   
 $60$   
 $\underline{-54}$   
 $60$   
 etc....

Long division for  $\frac{3}{700}$ :  
 $700 \overline{) 3.0000000}$   
 $\underline{-2.800}$   
 $.2000$   
 $\underline{-.1400}$   
 $.6000$       $0.00428571\overline{}$   
 $\underline{-.5600}$   
 $.4000$   
 $\underline{-.3500}$   
 $.5000$   
 $\underline{-.4900}$   
 $.1000$   
 $\underline{-.700}$   
 $.3000$  etc...  
 (repeats indefinitely)

Converting 'Repeating Decimals' to Fractions: Using algebra

Examples:  $\overline{.7}$  let  $n = \overline{.77}$  then,  $10n = 7.\overline{77}$

$$\begin{array}{r} 10n \\ - n \\ \hline 9n \end{array} \quad \begin{array}{r} 7.\overline{77} \\ - .\overline{77} \\ \hline 7.0 \end{array} \quad \begin{array}{l} \text{substitution reveals} \\ \text{that } 9n = 7 \end{array} \quad n = \frac{7}{9}$$

$11.\overline{18}$  let  $m = \overline{.18}$  then,  $100m = 18.\overline{18}$       $11.\overline{18} = 11 + m$

$$\begin{array}{r} 100m \\ - m \\ \hline 99m \end{array} \quad \begin{array}{r} 18.\overline{18} \\ - .\overline{18} \\ \hline 18 \end{array} \quad \begin{array}{l} m = \frac{18}{99} \\ 11.\overline{18} = 11 \frac{18}{99} \end{array}$$

$234.0017\overline{6}$

Separate the number into parts:  $234 + .001 + .0007\overline{6}$

Convert the parts to fractions:  $234 + .001 = \frac{1}{1000} +$  let  $p = .0007\overline{6}$

$$= \frac{99}{99000} \quad \begin{array}{l} 1000p = .7\overline{6} \\ 100000p = 76.\overline{6} \end{array}$$

$$\begin{array}{r} 100000p \\ - 1000p \\ \hline 99000p \end{array} \quad \begin{array}{r} 76.\overline{6} \\ - .7\overline{6} \\ \hline 76 \end{array} \quad p = \frac{76}{99000}$$

Combine the Fractions:  $234 + \frac{99}{99000} + \frac{76}{99000} = 234 \frac{175}{99000}$       $.0007\overline{6} = \frac{76}{99000}$
