NEWS

Date: January 8, 2018

Dear Friends,

Welcome to 2018! As we head in to the new year I would like to take the opportunity to thank every one of you for your continued business and support. 2018 looks to be an interesting year with much uncertainty but our commitment to bring valuable data to you will stay the same. I encourage you to look over all of the reports you receive from us monthly and if there are any questions on a report-please ask! That is what we are here for.

Enclosed you will find a number of months' newsletter records. I always enjoyed additions made from our extension services and did not have any available so to save a mailing cost I have included 2 newsletters worth of records. I am always looking for input or articles to include that may interest you.

If anyone has any comments or suggestions for topics to add to the newsletter, please give me a call at 920-386-2637 or email at hollysmith@dodgecountydhia.org.

Sincerely,

Holly Smith

Test The Best... Cull The Rest...

Push[®] is a blend of highly digestible proteins and energy components developed to help calves overcome stress and disease challenges. The globulin proteins and high energy components included in Push help cleanse a calf's intestinal tract and energize the immune system.

When should Push be used?

Push is recommended for newborn calves. Giving Push to calves immediately following birth provides them with an extra burst of energy. Push can provide support while colostrum is being warmed or while the cow is being milked and colostrum is collected. This easy to administer energy source is also especially useful if the calf is not suckling or was not fed adequate colostrum. By giving Push at birth, the benefits can be seen sooner rather than later.

What is the recommended dosage?

The recommended dosage rate is one tube (30cc) of Push. If needed, a second tube can be given to the calf 12 hours later.

Are there other situations in which a calf might need Push?

Push can be useful any time a calf is:

- Recovering from disease or infection.
- Not consuming adequate feed and acting lethargic.
- Transported over some distance, has become less alert and seems depressed.
- Scouring, not eating and losing weight. In this situation an electrolyte, such as NuLife[®] Oral Electrolytes, that aids in controlling the fluid balance within the calf should also be administered.
- Not given colostrum immediately following birth. (Example: The calf is born at night and colostrum will not be fed until the next morning.)

How does Push differ from NuLife ReBOUND[™]?

Push is a protein/energy product aimed at giving the calf energy and providing immune system support. NuLife ReBOUND, available in capsule, paste and powder form, is a direct-fed microbial that aids in proper digestion. Push and NuLife ReBOUND can be used in conjunction.

Does Push replace colostrum?

Push does not replace colostrum. However, Push can be used along with colostrum as the specialized formula of Push is complementary to colostrum. Push can be used at birth to further enhance the benefits of colostrum feeding. Push helps to increase the energy and antibodies absorbed from colostrum. Push also contains additional peptides that will enhance and support the immune system.
