2. Dissolve to Wide Shot of Host	Welcome to Ai Now. I'm your host, Ryan Barker. I am truly excited to be here today, to show you how to make peach jello shots, with peach slice gummies. I am sure at some point in our lives we've all had or at least hears of "jello shots." If you have not heard about or came across jello shots, they are exactly what they sound like: (Pause to switch cameras) an individually portions size of jello traditionally consumed as a shot. They are great with or without booze, but since we are adults here we will be making the adults-only version of the peach jello shots. Okay let's get started. 5. MCU Host	Wisk. We will go ahead and place your equipment on the screen while I set things up. Since we do not have a stove we will microwave the water until it extremely hot, <u>which you can also do if you do not</u> want to use a pot. You can also use a large measuring cup instead of a mixing bowl it makes it easier to pour into containers.	Insert Equipment Graphics Ready Camera 2 Ready Ingredients Graphics
	Now that we have the equipment. Let's set up our ingredients. Here is what you will need: a box of peach flavored jello mix. If using another flavor make sure the vodka either matches the flavor or is flavorless. One cup of boiling water, 1 cup of peach vodka. An as an option you may use gummies or fruit to match the flavor of your jello shot.	Dissolve in to Camera 2 Insert Ingredients Graphics
	The ingredients and equipment are set, now let's make some jello shots. First you take a baking sheet or plate whichever is convenient for you and place your plastic cups individually on it. For our jello shots today we will be using peach gummies. Place one or two gummies at the bottom of each cup then set them aside.
