

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

SPATHOGLOTTIS HARDINGIANA

Origin: Asia

Temperatures: Hot to intermediate growing small size terrestrial orchid species

Light: Bright light

Watering & Fertilizing: Regular watering and fertilizing in active growing season, deciduous in the winter time.

General care: This super small size terrestrial orchid species is not commonly seen in cultivation. Small size plants produce beautifully shaped and colored blooms. Grows best under hot to intermediate conditions, in bright filtered light or filtered LED light and good humidity with air movement. They do go through cycle – active growing season starts in spring and continues through summer. They go dormant in fall. You should keep regular watering and fertilizing in active growing season, and withhold watering and fertilizing in fall/winter when bulb is dormant. Can be grown potted. Lighter they will grow, darker and more vivid leaves will appear. Great plant for indoor growing on windowsills or greenhouses and outdoors in proper zones.
