

## DENDROBIUM TRIGONOPUS

**Origin:** Asia

**Temperatures:** Hot to cold growing small size orchid species

**Light:** Bright shade / filtered LED light

**Watering & fertilizing:** Regular watering and fertilizing in active growing season, dormant during the winter time, limited watering and no fertilizing when dormant.

**General care:** Very cute and still uncommon Dendrobium species – blooms are very similar to Dendrobium senile, waxy shiny yellow, canes are shorter and fatter without hair, more like bellatulum. Easy to grow species too. Grows best under cool to hot conditions, in bright light or filtered LED light, good humidity and air movement. These are deciduous plants and as others in the group, you should stop fertilizing in October and stop watering providing only a light mist when plants are leafless and dormant over the winter time with some cool nights and bright light. Can be grown potted or mounted. Great plant for terrariums, vivariums, greenhouses and outdoors in proper zones.
