

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM PERPAULUM

Origin: Thailand

Temperatures: Hot to cold growing miniature orchid species

Light: Bright shade

Watering & Fertilizing: Regular watering and fertilizing in active growing season, goes dormant – stop fertilizing in October, stop watering when all leaves fall off – resume watering and fertilizing in the spring when new growths appear.

General care: Super cute and rarely seen miniature Dendrobium species from Stachyobium family with very little information about growing habit. Can be grown under hot to cool conditions, either potted or mounted, bright shade, good air movement, letting dry out between waterings. Will be completely dormant in the winter time. Great for outdoor / indoor growing, windowsills or greenhouses, can be grown outside in Florida year - round.
