MICRO, MINIATURE AND SMALL ORCHIDS

## GOODYERA NISHIKIRAN JAPAN

**Origin:** Asia

**Temperatures:** Warm to intermediate growing small size jewel / terrestrial orchid species

**Light:** Bright shade

**Watering & Fertilizing:** Regular watering and fertilizing year-round.

**General care:** Jewel orchids are among the most popular species nowadays, grown for their amazing foliage with variety of leaf patterns and colors. Nishikiran Japan is quite stunning and rare jewel orchid that is not commonly seen in cultivation with amazing cream/green color netting with some pink tones. As many jewel orchids, it requires constant high humidity, should be grown moist (not soggy wet) and with some bright indirect light (shade will work too but colors will suffer). This orchid should be grown always potted in well drain mix, sphagnum moss or peat moss with some perlite works well for us. Great plant for terrariums, vivariums, glass orbs, vases, indoor growing on windowsills or greenhouses and outdoors in proper zones.
