

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

BULBOPHYLLUM COMOSUM

Origin: Asia

Temperatures: Cool to warm growing small orchid species

Light: Shade

Watering & Fertilizing: Regular watering and fertilizing when in active growing season, goes completely dormant for the winter - no fertilizing from October, no watering from December till new growths appear.

General care: Stunning Bulbophyllum species, fuzzy whimsical blooms appear in the winter / early spring time. Grows best in shade, cool to warm temperatures, potted or mounted, good air movement, good watering and fertilizing in active growing season, keep dry with only light mist in the winter time to prevent pseudobulbs from shriveling! Great for windowsills, greenhouses, outside growing year – round.
