MICRO, MINIATURE AND SMALL ORCHIDS

## BULBOPHYLLUM RETICULATUM

**Origin:** Borneo

**Temperatures:** Warm to hot growing small orchid species

**Light:** Bright shade

**Watering & Fertilizing:** Regular watering and fertilizing year-round, high humidity.

**General care:** Attractive foliage makes this Bulbophyllum one of the most sought for and hard to find. Usual imported cuttings are very hard to establish and majority dies within few weeks or months, but finally there are hardy growing seedlings, much easier to establish and grow. This particular Bulbophyllum likes extra Magnesium and Calcium too. Can be grown potted or mounted, high humidity, warm to hot and bright shade. Great for greenhouses, terrariums, vivariums, vases, frog encounters and in Florida outside year-round.
