

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

CATASETUM SHUNKEI

Origin: Peru

Temperatures: Hot to intermediate growing small size orchid species

Light: Bright light

Watering & fertilizing: Regular watering and fertilizing in active growing season, keep completely dry in the dormancy, no fertilizer from October

General care: Very attractive and one of the smallest Catasetum species with amazing blooms. Follow Catasetum culture and you will be rewarded with amazing blooms - Grows best under warm to hot temperatures, abundance of water and fertilize in active growing season, will go completely dormant. Prefers bright shade to bright indirect light. They do better potted, but they can be grown mounted as well. These are coming from Southern Hemisphere and maybe dormant - no active roots or growths. It will take them at least 1 cycle to adjust to our Northern hemisphere. Wait for signs of new growths following dormancy (no water no fertilizer) and once you have new growths with roots resume slowly watering and fertilizing. Perfect for outside growing in proper climate, greenhouse growing or windowsills.
