MICRO, MINIATURE AND SMALL ORCHIDS

## DENDROBIUM REFLEXITEPALUM

**Origin:** Java & Sumatra

**Temperatures:** Hot to warm growing small size orchid species

**Light:** Bright shade

**Watering & Fertilizing:** Regular watering and fertilizing year-round

**General care:** Very interesting and not so common in cultivation

Dendrobium species, with pendulous growing habit and blooms that will in many cases reflex petals and sepals. Blooms between fall – spring. Bright shade, regular watering and fertilizing letting dry out, older leaves will fall off at some point. Due to its clumsy pendulous growing habit we suggest to mount plants once they get bigger and hang them downwards. Perfect for windowsills, greenhouses or Florida outside year-round.
