

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM UNICUM

Origin: Asia

Temperatures: Hot to cool growing small size orchid species

Watering & fertilizing: Regular watering and fertilizing in active growth, goes dormant, no fertilizer from October, no watering after leaves drop off or from mid-December till new growths appear in spring.

General care: One of our favorites, amazing small Dendrobium with stunning huge shiny orange blooms. This is completely deciduous species so deciduous culture must be followed for successful growing and blooming. Grows best under hot to cool temperatures, bright light, and cool winter temperatures will initiate buds. Keep regular care when in active growing spring/fall, stop fertilizing in October and stop watering when leaves drop or by middle of December to initiate budding. Resume watering and fertilizing in spring when new growths appear. Can be grown potted or mounted. Great for windowsills, greenhouses or outdoor growing year round in proper zones.
