

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

DENDROBIUM HEKOUENSE

Origin: China

Temperatures: Cool to warm growing mini miniature size orchid species

Light: Bright shade

Watering & Fertilizing: Regular watering and fertilizing in active growing season, completely dormant in the winter, no fertilizing from October, no watering in winter till new growths appear in the spring. (light mist to keep pseudobulbs from shriveling).

General care: This is fairly new and quite stunning Dendrobium species. Pseudobulbs are truly mini – miniature size, but blooms are giant! Grows best under cold to warm conditions, in bright shade, with good air movement and drying out between waterings. Goes completely deciduous – do not fertilize from end of October, and do not water when leafless but keep occasional light misting to keep pseudobulbs from shriveling. Can be grown potted or mounted. Great for windowsills, greenhouses, outdoor growing in proper zones year-round.
