MICRO, MINIATURE AND SMALL ORCHIDS

## DENDROBIUM NOBILE TYPE

**Origin:** Cross

**Temperatures:** Warm to cold growing medium size orchid species

**Light:** Bright light

**Watering & Fertilizing:** Regular watering and fertilizing in active growing season, deciduous – no fertilizing and watering when dormant

**General care:** Nobile type Dendrobiums are quite popular among all orchid growers who likes Dendrobiums – perfect for beginners, and very easy to grow. These come in range of colors. They will need good watering and lot of light and fertilizer during active growing season between spring and fall, and dry winter rest – stop fertilizing in October and withhold water once new growths mature in the winter time, with only spraying to protect canes from excessive shriveling, once every 7-10 days. They NEED cold winter weather to produce clusters of beautiful and scented blooms. Resume regular watering and fertilizing when new growths start in the spring.
