MICRO, MINIATURE AND SMALL ORCHIDS

FERNANDEZIA MACULATA

Origin: South America

Temperatures: Intermediate to cold growing miniature size orchid species

Light: Bright shade

Watering & fertilizing: Regular watering and fertilizing year-round, high humidity and good quality water.

General care: One of tiny jewels, this pendulous growing miniature orchid produces stunning red blooms. Interesting liana like growing habit makes it perfect plant for hanging down in terrariums or vivariums. Grows best cool to intermediate, shade, and high humidity with good quality water. By observation we do feel like this orchid likes to slightly dry out between waterings rather than staying wet all the time, and it was issue in the past keeping them too wet! Can be grown potted or mounted. Great plant for terrariums, vivariums, glass orbs, indoor growing on windowsills or greenhouses and outdoors in proper zones.
