MICRO, MINIATURE AND SMALL ORCHIDS

GRAMMATOPHYLLUM SCRIPTUM 'DWARF'

Origin: Philippines, Borneo, Fiji

Temperatures: Warm to hot growing small “dwarf” size orchid species

Light: Bright light

Watering & fertilizing: Regular watering and fertilizing year-round, high humidity and good fertilizing in active growing season.

General care: This is amazing achievement, small ‘dwarf’ form of one of the biggest orchid was achieved by Hawaii growers and now everyone can enjoy these beautiful blooms, even with very limited space! Grow it as your huge Grammatophyllums, hot to warm temperatures, very bright light, early morning or late afternoon sun, but protect from mid-day strong sun, good air movement and very heavy watering and fertilizing during active growing season with high humidity, low fertilizing during winter months – old pseudobulbs will shed leaves. Best grown potted but can be mounted. Great plant for indoor growing on windowsills or greenhouses and outdoors year-round in proper zones.
