

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

GROSOURDYA MUSCOSA

Origin: Asia

Temperatures: Hot to intermediate growing small orchid species

Light: Bright shade

Watering & fertilizing: Regular watering year-round and weak fertilizing (1/8 strength) with every watering or ¼ strength weekly.

General care: Great starter small orchid, very easy to grow when provided proper conditions – likes shade or bright shade (not strong direct light), regular watering but letting dry between waterings, weak fertilizing. Will do great outside in Florida year-round, perfect for windowsills or greenhouses. Can be grown potted or mounted, if potted, do not overpot and do not use much of media (moss or bark) so the roots will have chance to dry out. This orchid blooms many times throughout the year and spikes can re-bloom for weeks.
