

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

MACROCLINIUM DALSTROEMII

Origin: Ecuador

Temperatures: Hot to warm growing miniature size orchid species

Light: Bright shade

Watering & Fertilizing: Regular watering and fertilizing year-round

General care: Going back in time, this used to be one of only 'few' mini miniature orchids known and available for sale, and commonly posted online, but it has disappeared somehow, which is a shame. Still amazingly beautiful, spikes looking like fireworks in the sky and easy to grow, great for outside growing in warm climate or windowsills, glass orbs, terrariums, vivariums and frog encounters.
