MICRO, MINIATURE AND SMALL ORCHIDS

## SCHOENORCHIS SEIDENFADENII

**Origin:** Thailand & Vietnam

**Temperatures:** Hot to intermediate growing miniature size orchid species

**Light:** Bright light

**Watering & fertilizing:** Regular watering and fertilizing year-round, letting dry out between waterings

**General care:** Easy to grow miniature species is great starter plant and perfect for hot Florida. Schoenorchis seidenfadenii is one of our favorites, and not as common as its two sisters fragrans or tixier. Grows best under warm conditions, bright light, regular watering but must dry completely between. Due to growing habit it's best grown mounted. Great plant for terrariums, vivariums, glass orbs, vases, indoor growing on windowsills or greenhouses and outdoors in Florida year-round.
