

BULBOPHYLLUM LEMNISCATUM

Origin: Thailand & Myanmar

Temperatures: Hot to warm growing miniature size orchid species

Light: Bright shade

Watering & Fertilizing: Regular watering and fertilizing in active growing season, fully deciduous – no fertilizing from October, only light mist during the wintertime.

General care: Very cool and strange looking blooms on this deciduous Bulbophyllum species. Grows best under hot to warm conditions, in bright shade or filtered LED light, good humidity and air movement. Can be grown mounted or potted. Goes deciduous – no fertilizing from October, little watering during the wintertime just to prevent pseudobulbs from shriveling, till new growths appear in spring. Great plant for terrariums, vivariums, greenhouses and outdoors in proper zones.
