

TARZANEGROUP

MICRO, MINIATURE AND SMALL ORCHIDS

CHILOSCHISTA SEGAWAI

Origin: Taiwan

Temperatures: Hot to intermediate growing small size leafless orchid species

Light: Bright light

Watering & Fertilizing: Regular watering and fertilizing year-round

General care: Asian leafless orchids are very attractive and highly sought after by orchid growers. Segawai is still quite an uncommon species in cultivations. They grow best under hot to intermediate conditions, in bright filtered light, with good air movement. For higher humidity you can cover mounts with Spanish moss. Great plants for terrariums, vivariums, greenhouses, windowsills and outside in proper zone.
