

Conflunt SDS Software Defined Storage by Buvet Tech

Conflunt SDS

Conflunt SDS Solution

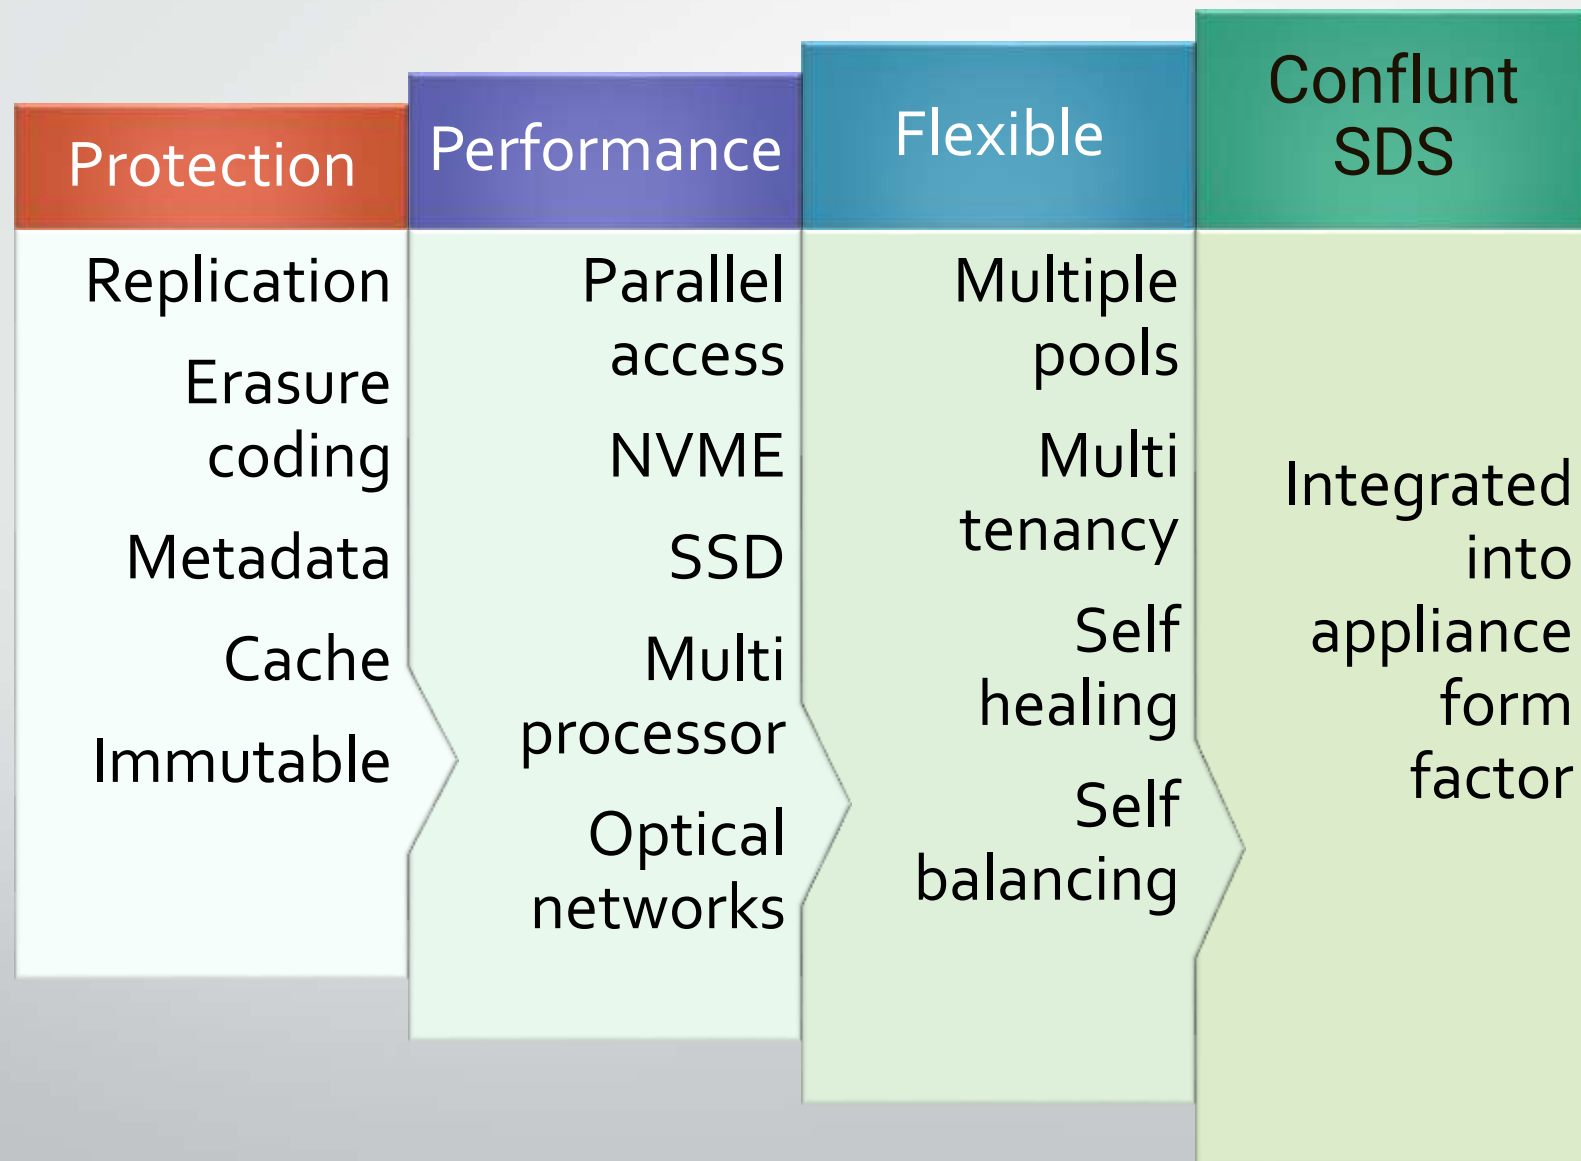

Distributed topology across many nodes

Distributed Scale out architecture

Extensively scalable from a modular storage appliance to a cost effective cloud solution

Industry leading storage functionality such as File, Block and Object, Thin Provisioning, Erasure Coding, and Cache Tiering

Manage storage clusters with an intuitive and easy to user web GUI administrative interface.

Features

Multiple Controller
Active - Active
High Availability

Block volumes for VMs

Cache tiering
Compression
Data-at-rest encryption

Multiple storage
backends
iSCSI interfaces, File
services interfaces for
NFS, SMB.

VM disk operations
Create, delete, extend,
and migrate volumes

Replication factor
(2/3/more)
Data spreads across the
cluster

Data security
Disk level
Node level
Site level (DR)

Data live replication :
Mirror data Uni
directional / Bi directional
between multiple sites

Virtualization Features

SNAPSHOT

LINKED CLONES

GEO WIDE
REPLICATION

Conflunt SDS Server Specification

Type	Specifications
Base board	Dual socket server motherboard
Processor	Intel Xeon Scalable processor 8 / 10 / 12 / 16 / 18 / 20 / 22 Cores
Memory	32 GB DDR4 ECC, scalable up to 1 TB. 16 memory slots.
Storage Drives	Flash storage with SSD drives : 240 GB to 7.68 TB Spinning drives with SAS/SATA : 1TB to 20TB
Network ports	4 x 10G/25G/40G Optical, RJ45, 1 x 1G management port
Internal ports	1 VGA, 4xUSB, 16 memory slots, 6 x PCIe 3.0
Power supply	600W/700W/750W redundant power supply
Chassis factor	2U/3U/4U Rack form factor with 8/16/24 bays Supports 2.5Inch & 3.5Inch hard disks.
