## Hi I am fallen tree waste

It is not always that I intend to fall over in case of storm or hurricane, I am mostly let go for the purpose to make way for the tree beside me, to let him grow to its fullest celled spacing, this happens at 7 years farm plant. Although not a real furniture, I am proud to serve as nuance item at WWW?<sup>TM</sup>

**I am 100% village V-Legal certified mahogany wood**

I am vital to farmers to grow for their unproductive soil. I serve as a buffer when crops are for their everyday expenses, they let go of me when big ticket expenditure arrive. Although not a **WWW?**<sup>™</sup>, I am happy to be at Nuansa for a second life

Our society produces a lot of waste and has developed a sufficient system along with it. **WWW?** is born out of a basic thought that leaving an unproductive waste wood to decompose (at landfill sites) will release the same amount of carbon as they do in disposal burning chambers.

Our **WWW?** material uses all unproductive wood available, waste wood with no destinations except disposal like. Naturally fallen trees, wood from non wood producing factories, old wooden houses, boats, trucks, etc.

We then sort the wood to various dimensions and assemble them for furniture construction. Non toxic clear/stained coat (shellac) is chosen for the finishing. You may find nails, screws, bolts filled cavities along with other imperfections underlining its authentic value. These imperfections shares a warm history of its past and never intentionally made.
